

AI Overview (GenAI Masterclass)

Module 1	Generative AI Overview
Module 2	AI for Study & Skill Learning
Module 3	AI for Image Creation
Module 4	AI for Portfolio & Projects
Module 5	AI for Job Hunting
Module 6	Final Hands-on Challenge

১. Generative AI কী এবং কীভাবে কাজ করে

Generative AI (GenAI) হলো এমন এক ধরনের আর্টিফিশিয়াল ইন্টেলিজেন্স, যা ইউজারের দেওয়া নির্দেশনার (Prompt) ওপর ভিত্তি করে সম্পূর্ণ নতুন কনটেন্ট - যেমন **টেক্সট**, **ছবি**, **অডিও** বা **কোড** তৈরি করতে পারে। এটি গুগলের মতো কোনো জায়গা থেকে তথ্য কপি-পেস্ট করে না। বরং এটি লাখ লাখ ডেটা থেকে প্যাটার্ন শিখেছে।

এটি কাজ করে **Next Token Prediction**-এর মাধ্যমে। সহজ কথায়, এটি আপনার লেখা কয়েকটা শব্দের পর লজিক্যালি পরের শব্দটি কী হওয়া উচিত, তা প্রেডিক্ট করে। ঠিক যেমন মোবাইলের কিবোর্ডে আমরা আমি ভাত... লিখলে কিবোর্ড নিজে থেকেই খাবো সাজেস্ট করে - GenAI এই কাজটাই অনেক বিশাল পরিসরে এবং নিখুঁতভাবে করে।

- ChatGPT / Claude/gemini/deepseek/grok → text generate করে

- DALL-E / Midjourney/chatgpt/nanobanana → image generate করে
- GitHub Copilot/cursor/volt/lovable/antigravity/etc → code generate করে
- Suno / Udio/gemini/elevenlabs → music generate করে

প্র্যাক্টিক্যাল ইউজেস (টুল: ChatGPT / Claude)

এই সেশনে দেখানো হবে যে GenAI শুধু তথ্য দেয় না, বরং সম্পূর্ণ **নতুন ও ক্রিয়েটিভ কনটেন্ট** তৈরি করে দিতে পারে।

✓ Practical Prompt - Try This!

Act as a marketing copywriter. Write a 3-line creative hook

for a new web development bootcamp targeting university students.

💡 আউটপুট কী হবে?

AI সাথে সাথে নতুন এবং আকর্ষণীয় কিছু লাইন জেনারেট করে দেবে যা আগে কোথাও লেখা ছিল না। এটাই Generative AI-এর মূল শক্তি।

২. Token Limit এবং Context Window কী?

Token -

AI আমাদের মতো আস্ত "শব্দ" (Word) পড়ে না। সে শব্দগুলোকে ছোট ছোট টুকরোতে ভাগ করে নেয়, যাকে **"Token"** বলে।

- **ইংরেজিতে:** সাধারণত ৪টি ক্যারেক্টারের সমান ১টি token। ১০০ শব্দ ≈ প্রায় ১৩০ token।
- **বাংলায়:** বাংলা লিপিতে token সংখ্যা কিছুটা বেশি হতে পারে।
- **Rule of Thumb:** ১,০০০ token ≈ প্রায় ৭৫০ ইংরেজি শব্দ।

Context Window -

Context Window হলো AI-এর **শর্ট-টার্ম মেমোরি** বা RAM। আপনি একসাথে তাকে কত বড় টেক্সট, PDF বা কমান্ড দিতে পারবেন এবং একটি চ্যাটে সে কতক্ষণ আগের কথা মনে রাখতে পারবে - তা নির্ভর করে এই Context Window-এর উপর।

⚠ সতর্কতা

Context Window শেষ হয়ে গেলে AI আগের কথা ভুলে যেতে শুরু করে। তাই দীর্ঘ conversation বা বড় document-এ সাবধান থাকতে হবে।

বিভিন্ন AI-এর Context Window তুলনা

AI Model	Context Window	বাস্তব ক্ষমতা
Claude 3.5 Sonnet	~200,000 tokens	~১৫০,০০০ শব্দ বা ৫০০+ পৃষ্ঠা
GPT-4o	~128,000 tokens	~৯৬,০০০ শব্দ বা ৩০০+ পৃষ্ঠা
Gemini 1.5 Pro	~1,000,000 tokens	~৭৫০,০০০ শব্দ বা ২,৫০০+ পৃষ্ঠা

প্র্যাক্টিক্যাল ইউজেস

Claude বা Gemini 1.5 Pro খুলুন এবং একটি বড় PDF আপলোড করে নিচের prompt দিন:

✅ Practical Prompt - PDF Summarizer

Summarize the key findings from this document in 5 bullet points.

Keep each point under 2 sentences. Use simple language.

💡 কী শিখবেন?

এই demo-তে বোঝা যাবে Context Window-এর power - AI পুরো document পড়ে তারপর সারসংক্ষেপ দেয়।

৩. Traditional Search বনাম AI Assistant

Traditional Search (Google)

Information Retrieval: আপনি কিছু খুঁজলে Google আপনাকে হাজার হাজার ওয়েবসাইটের লিংক এনে দেবে। সঠিক উত্তরটা আপনাকে ওয়েবসাইটগুলোতে ঢুকে পড়ে নিজেই বের করতে হবে।

AI Assistant (ChatGPT, Claude, Gemini)

Reasoning & Synthesis: AI সরাসরি আপনার জন্য বিভিন্ন তথ্য পড়ে, বুঝে, প্রসেস করে একটি গোছানো উত্তর বা সমাধান তৈরি করে দেয়।

কখন কোনটা ব্যবহার করবেন?

বিষয়	Google Search	AI Assistant
লাইভ তথ্য (আজকের খবর, স্কোর)	✓ Best choice	✗ জানবে না
নির্দিষ্ট ওয়েবসাইটের লিংক	✓ Best choice	✗ ভুল লিংক দিতে পারে
Email / চিঠি লেখা	✗ হবে না	✓ Best choice

Code debugging	✗ হবে না	✓ Best choice
বড় topic সহজে বোঝা	⚠ অনেক article পড়তে হবে	✓ Best choice
Fact-check / সূত্র যাচাই	✓ Best choice	⚠ যাচাই করে নিন

প্র্যাক্টিক্যাল ডেমো

একই প্রশ্ন Google এবং AI-তে করুন, পার্থক্য দেখুন:

🔍 Google-এ Search করুন
How to scale a Meta ad campaign?
ফলাফল: অনেকগুলো blog article-এর list আসবে।
আপনাকে নিজে ঢুকে পড়তে হবে।

🤖 AI-তে একই প্রশ্ন দিন
How do I scale a Meta ad campaign step by step?
I am a beginner. Give me a structured action plan.
💡 পার্থক্য
AI সরাসরি step-by-step guide দিয়ে দেবে। Google-এ হাজারটা article থেকে বেছে নিতে হতো।

৪. Prompt কীভাবে কাজ করে - Good vs Bad Prompt

AI-এর কাছে কোনো magic নেই। আপনার **input (Prompt)** যত ভালো হবে, **output** তত নিখুঁত হবে। অস্পষ্ট prompt দিলে AI সাধারণ এবং boring উত্তর দেয়।

ভালো Prompt-এর মূল উপাদান:

- **Context দেওয়া:** পরিস্থিতি ও background বলুন
- **Role সেট করা:** AI-কে একটি চরিত্র দিন (Expert, Teacher, Copywriter)
- **Format বলে দেওয়া:** কত লম্বা, কোন structure চাই সেটা বলুন
- **Audience উল্লেখ করা:** কার জন্য লিখছেন সেটা জানান

Bad vs Good Prompt - উদাহরণ ১ (Facebook Post)

● Bad Prompt	● Good Prompt
● "ডিজিটাল মার্কেটিং নিয়ে একটা ফেসবুক পোস্ট লিখে দাও।" সমস্যা: • Target audience নেই • Tone বলা নেই • Length উল্লেখ নেই • AI একটি robotic, boring পোস্ট লিখবে	"Act as a Senior Digital Marketing Expert. Write a short, engaging Facebook post (under 100 words) targeting young entrepreneurs in Bangladesh, explaining why Meta Ads are better than traditional boosting. Use a conversational tone,

	include 2 bullet points, and end with a CTA asking them to comment."
--	--

✓ কেন Good Prompt কাজ করে?

AI-কে একটি চরিত্র (Expert), নির্দিষ্ট অভিজ্ঞতা (Entrepreneurs), সাইজ (100 words), এবং স্ট্রাকচার (Bullet points, CTA) বলে দেওয়া হয়েছে। ফলে output হবে একদম professional।

Bad vs Good Prompt - উদাহরণ ২ (Team Message)

● Bad Prompt	● Good Prompt
● "টিমকে ডেডলাইনের কথা মনে করিয়ে একটা message লেখো।" সমস্যা: • কোন platform? (Slack/Email?) • Tone কী হবে? • কোন deadline? • কত লম্বা?	"Write a brief, encouraging Slack message to the graphics team. Remind them that the deadline for the Batch 14 creative theme is April 15. Keep the tone friendly but emphasize that hitting this deadline is crucial for the campaign launch. Keep it under 50 words."

Bad vs Good Prompt - উদাহরণ ৩ (CV লেখা)

● Bad Prompt	● Good Prompt
● "CV লিখে দাও" সমস্যা: • কে লিখছে বলা নেই • কী field নেই	আমি একজন ৩ বছরের অভিজ্ঞ Web Developer। আমার একটি ATS-friendly CV লিখে দাও যেটিতে React, Node.js এবং MongoDB skills highlight থাকবে। Format: একপাতায়, বাংলাদেশের job market-এর জন্য। Length: 400-500 words।"

- কতটুকু experience নেই
- কোন format নেই

৫. AI Prompting Techniques -

Technique 1: Few-Shot Prompting (উদাহরণের মাধ্যমে শেখানো)

AI-কে শুধু instruction না দিয়ে ২-১টি **example** দিয়ে দিলে output একদম আপনার মনের মতো হয়।

● Bad Prompt	● Good Prompt
● "ক্যাম্পেইনের জন্য কিছু catchy headline লিখে দাও।" সমস্যা: • কোন style চাই বলা নেই • কোন tone চাই বলা নেই • AI random style-এ লিখবে	"Write 3 catchy headlines for a web development bootcamp. Use the same tone and style as the examples below: Example 1: Unlock your coding potential in just 6 months. Example 2: From zero to full-stack - start today. Now give me 3 more."

Technique 2: Chain of Thought Prompting (ধাপে ধাপে ভাবানো)

Logical বা technical কাজে AI-কে সরাসরি উত্তর না চেয়ে **ধাপে ধাপে চিন্তা করতে বললে** ভুলের মাত্রা প্রায় শূন্যে নেমে আসে।

● Bad Prompt	● Good Prompt
● "Write a Python script using OpenCV to remove watermarks from images." সমস্যা: • AI একবারে সব করতে গিয়ে logical error করতে পারে	"I am building a web-based AI watermark remover. Think step-by-step: Step 1: Explain the logic of detecting watermarks using OpenCV. Step 2: Write Python code to blur or remove the detected watermark. Step 3: Explain how to optimize this code for faster processing on a web server."

 কেন কাজ করে?

AI-কে ধাপে ভাগ করে চিন্তা করতে বলায় সে প্রতিটি ধাপ সঠিকভাবে complete করে এগোয়। এটি math, coding ও complex planning-এ বিশেষভাবে কার্যকর।

Technique 3: Role Prompting (চরিত্র নির্ধারণ)

AI-কে একটি নির্দিষ্ট expert-এর role দিন। Output সেই expert-এর দৃষ্টিভঙ্গি থেকে আসবে।

✓ Role Prompting Example
You are an experienced Nutritionist with 10 years of practice.
I am a 25-year-old male, weight 75 kg, height 5'8".
Create a 7-day balanced meal plan specifically for weight loss.
Consider Bangladeshi food availability.

Technique 4: Constraint Prompting (সীমা নির্ধারণ)

Output-এর format, length বা style নির্দিষ্ট করে দিন।

✓ Constraint Prompting Example
Climate Change সম্পর্কে একটি paragraph লিখো।
Constraints:
- ঠিক ১০০ শব্দের মধ্যে
- শুধু verified facts ব্যবহার করে।
- Simple vocabulary (Grade 8 level)
- বাংলায় লিখো

Technique 5: Context Injection (পরিপ্রেক্ষিত যোগ করা)

AI-কে আপনার background information দিয়ে specific context-এ রাখুন।

✓ Context Injection Example
Context: আমি একটি online clothing brand-এর Social Media Manager।
Target audience: ১৮-২৫ বছর বয়সী Bangladeshi তরুণী।
Brand voice: trendy, relatable, Bangla-English mix।
Task: Eid collection launch-এর জন্য ৫টি Instagram caption লিখো।
প্রতিটি caption-এ ৩টি relevant hashtag দাও।

Technique 6: Reverse Prompting (AI-কে দিয়ে প্রশ্ন করানো)

যখন আপনি নিজেই জানেন না prompt-এ কী কী information দেওয়া উচিত, তখন এই জাদুকরী **technique** ব্যবহার করুন - AI নিজেই আপনাকে প্রশ্ন করবে।

✓ Reverse Prompting - Master Prompt

"I want you to act as an expert Growth Marketing Strategist.

My goal is to organize a grand alumni event for 2000+ people

and I need a complete communication strategy.

Before you provide the strategy, ask me 5 specific questions

about the event, budget, and audience so you can give me

the most accurate and customized plan."

💡 কেন এটি সবচেয়ে শক্তিশালী?

Reverse Prompting-এ AI নিজে সঠিক প্রশ্ন করে আপনার কাছ থেকে তথ্য নেয়, ফলে final output অনেক বেশি accurate ও personalized হয়।

Examples :

You are [ROLE].

Your goal is to [GOAL].

Context: [CONTEXT].

Instructions: [Step-by-step tasks].

Constraints: [Word limit, tone, style].

Output format: [How you want the result presented].

1. Marketing Prompt (Reel Script)

You are a creative scriptwriter specialized in short-form content.

Goal: Write a 45-second engaging reel script about “AI skills that will never die.”

Context: Target audience is Bangladeshi students (age 18–25) who are interested in tech.

Tone: Energetic, motivational, slight humor.

Instructions:

1. Start with a strong hook.
2. Give 3 practical insights.
3. End with a powerful CTA (call to action).

Constraints: Under 120 words.

Output format: Script with scene-by-scene breakdown.

2. Learning Prompt (Skill Discovery)

You are my AI career mentor.

Goal: Help me find the best AI-related skill for my future career.

Context: I have background in digital marketing and want to grow into AI marketing.

Instructions:

1. Analyze my background.
2. Suggest 3 most relevant AI skills.
3. Create a 30-day learning roadmap for each skill.

Output format: Table with columns (Skill | Why Important | 30-Day Plan | Tools).

3. Design Prompt (Visual Idea for Post)

You are a visual designer.

Goal: Create post ideas for my personal brand about “AI for Students.”

Context: Platform is LinkedIn, and audience = Bangladeshi learners.

Instructions:

1. Suggest 5 visual post ideas.
2. Describe composition, colors, and caption idea.

Constraints: Minimal design, modern tech vibe.

Output format: Table with (Idea | Visual Description | Caption).

4. Career Prompt (Resume Optimization)

You are a professional resume builder.

Goal: Optimize my resume summary for a “Digital Marketing Executive” role in a tech company.

Context: I have 3+ years experience in growth marketing, content strategy, and social media.

Instructions:

1. Write a powerful 3-sentence summary.
2. Use action verbs and measurable impact.

Constraints: Under 80 words, ATS-friendly.

Output format: Paragraph format.

⚙️ 5. Productivity Prompt (Daily AI Planner)

You are my personal AI productivity coach.

Goal: Create a daily routine for learning and working efficiently using AI tools.

Context: I want to balance my job (9 AM–6 PM) with learning AI for career growth.

Instructions:

1. Create a schedule for morning, evening, and weekend learning.
2. Recommend tools for note-taking, task automation, and reflection.

Output format: Table (Time | Activity | Tool | Purpose).

৬. AI Hallucination - কী, কেন হয়, কীভাবে ঠেকাবেন

AI Hallucination কী?

Hallucination মানে হলো AI-এর আত্মবিশ্বাসের সাথে মিথ্যা বলা। যেহেতু AI কোনো database নয়, এটি শব্দের পর শব্দ predict করে - তাই যখন তার কাছে সঠিক তথ্য থাকে না, তখন সে লজিক মিলিয়ে একটি কাল্পনিক বা ভুয়া তথ্য বানিয়ে দেয় এবং এমনভাবে বলে যেন সেটাই সত্যি।

সবচেয়ে বড় বিপদ কোথায়?

AI ভুল করলে সে আমি নিশ্চিত না বলে না। বরং সে অত্যন্ত confident ভাবে ভুল তথ্য দেয়, যা পড়তে সত্যি মনে হয়।

কেন Hallucination হয়?

- **Pattern Completion:** AI শব্দের pattern দেখে পরের শব্দ predict করে - সে সত্য কিনা যাচাই করে না।
- **Training Data-র সীমাবদ্ধতা:** কোনো তথ্য training-এ না থাকলে AI সেটা "তৈরি" করে ফেলে।
- **Overconfidence:** AI-এর স্বাভাবিকভাবে আমি জানি না বলার প্রবণতা কম।
- **Rare/Niche Topics:** কম পরিচিত বিষয়ে hallucination অনেক বেশি হয়।

Real-World Hallucination Scenarios - ৩টি প্রাঙ্গিক্যাল ডেমো

Scenario 1: The "Fake Reference/Link" Hallucination

এটি research ও marketing-এ সবচেয়ে বিপজ্জনক।

⚠️ Hallucination ডাকার Prompt (Try This!)

"Provide a summary of the 2024 case study by Harvard Business Review

on how Bangladeshi ed-tech platforms scaled their Meta Ads,

and include the exact URL to the article."

🔴 কী হবে?

AI অত্যন্ত confident-ভাবে একটি সুন্দর summary লিখে এবং নিচে hbr.org/2024/05/bangladesh-edtech-meta-ads টাইপের একটি সম্পূর্ণ ভুল link দেবে। ওই link-এ ক্লিক করলে 404 Error দেখাবে।

Scenario 2: The "Fake Library/Method" Hallucination

Web development ও coding-এ এটি সবচেয়ে সাধারণ।

⚠️ Hallucination ডাকার Prompt (Coding)

"Write a React functional component that fetches user data using

the 'useAutoFetchOptimized' hook from the standard React 18 library."

🔴 কী হবে?

React 18-এ useAutoFetchOptimized নামে কোনো hook নেই। কিন্তু AI আপনাকে বলবে না যে এটি ভুল - বরং এই ভুল hook ব্যবহার করে একটি সম্পূর্ণ React component লিখে দেবে, যা run করলে error দেবে।

Scenario 3: The "Phantom Feature" Hallucination

Software বা tool-এর non-existent feature সম্পর্কে AI মিথ্যা বলে।

⚠️ Hallucination ডাকার Prompt (Software)

"Give me step-by-step instructions on how to use the built-in

'Auto-Convert to Video' feature inside Google Analytics 4 (GA4)."

🔴 কী হবে?

GA4-এ এমন কোনো feature নেই। কিন্তু AI confident ভাবে বলবে: Go to Admin > Property Settings > Video Conversion... - পুরোটাই ভুয়া menu path।

Hallucination কীভাবে Identify করবেন? - Red Flags

🚩 এগুলো দেখলে সাবধান!

- খুব নির্দিষ্ট statistics বা percentage (যেমন "৭৩.২% case-এ")
- নির্দিষ্ট paper, book বা journal উল্লেখ করা
- কোনো ব্যক্তির quote বা বক্তব্য
- Legal, medical বা financial specific advice
- সাম্প্রতিক ঘটনার বিস্তারিত তথ্য
- Rare বা niche বিষয়ে অত্যন্ত confident উত্তর
- Non-existent software feature-এর step-by-step guide

Hallucination ঠেকানোর Advanced Prompts

✅ Anti-Hallucination Prompt 1 - Strict Grounding

"Answer the following question using ONLY the context provided below.

Do not use outside knowledge.

Before answering, quote the exact sentence from the text that

supports your answer.

If the answer is not in the text, reply ONLY with:

'Information not available in the source.' Do not guess."

✓ Anti-Hallucination Prompt 2 - Self-Verification

"Generate a list of 5 marketing tools for SEO.

For each tool, verify its current existence in 2024.

If you are not 100% sure about a tool's current status,

do not include it.

End the response by explaining how you verified this data."

✓ Anti-Hallucination Prompt 3 - Uncertainty Request

"[Topic] সম্পর্কে বলো এবং সাথে জানাও:

- তুমি কতটা নিশ্চিত? (High / Medium / Low confidence)

- কোন তথ্যগুলো আমার independently verify করা উচিত?

- তুমি কি কোনো তথ্য fabricate করেছ বলে মনে হচ্ছে?"

💡 Pro Tip: NotebookLM ব্যবহার করুন

Google-এর NotebookLM শুধু আপলোড করা document থেকেই উত্তর দেয় - তাই এখানে Hallucination শূন্যের কাছাকাছি। Grounded research-এর জন্য এটি সেরা tool।

৭. AI Output Verify করার Method

কেন Verify করা জরুরি?

AI-কে কখনোই অন্ধভাবে বিশ্বাস করা যাবে না - বিশেষ করে statistics, legal, medical বা financial তথ্যের ক্ষেত্রে। AI-এর output-কে সবসময় **starting point** হিসেবে নিন, final answer হিসেবে নয়।

Verification Methods - ৬টি কার্যকর উপায়

Method	কীভাবে করবেন	কখন দরকার
 Cross-check	একই তথ্য Google বা Wikipedia-তে খোঁজুন	Statistics, dates, facts-এ
 Source Checking	AI যদি source বলে, সেটি সরাসরি খুলে দেখুন	Academic ও research কাজে
 Multiple AI	Claude + ChatGPT উভয়তে একই প্রশ্ন করুন	Important decisions-এ
 Expert Consult	Medical/Legal/Financial বিষয়ে বিশেষজ্ঞ দেখুন	সর্বদা, এই category-তে
 Date Check	AI-এর knowledge cutoff জেনে নিন	সাম্প্রতিক তথ্যের জন্য
 Logic Check	Numbers ও calculations নিজে calculate করুন	Mathematical claims-এ

প্র্যাক্টিক্যাল Verification Prompts

Method 1: Cross-check with Another AI

✓ Cross-check Prompt
"Review this text for factual accuracy.
Point out any mistakes, outdated information, or logical flaws.
For each issue found, suggest the correct information.

[এখানে ChatGPT-এর দেওয়া উত্তর paste করুন]"

Method 2: Source চেয়ে নিন Prompt-এই

✓ Source Request Prompt

"Provide the latest statistics on global smartphone usage in 2024.

Include clickable links to authoritative sources for your data.

Only include statistics you can verify with a real source."

Method 3: AI-কে নিজেই Fact-check করতে

✓ Self Fact-check Prompt

"নিচের তথ্যগুলো fact-check করো এবং প্রতিটির পাশে লেখো:

✓ Likely True

⚠ Uncertain - Verify করুন

✗ Likely False

[এখানে AI-এর আগের উত্তর paste করুন]"

Method 4: Gemini-এর G (Google It) Feature

💡 Gemini-র বিশেষ Feature

Gemini-তে কোনো উত্তর generate করার পর নিচে থাকা G (Google It) আইকনে ক্লিক করুন। এটি internet-এর সাথে cross-check করে live verify করে দেয় - কোন line সত্য আর কোনটি ভুয়া।

Quick Verification Checklist

AI Output পেলে এই Checklist Follow করুন

- ☐ তথ্যটি কি সাম্প্রতিক? (AI-এর cutoff date জানুন)
- ☐ কোনো specific number বা percentage আছে? → Verify করুন
- ☐ কোনো person বা book cite করা হয়েছে? → সেটি exist করে কিনা দেখুন
- ☐ Medical/Legal/Financial advice? → Expert-এর সাথে confirm করুন
- ☐ একই প্রশ্ন Google-এ করলে কী আসে?
- ☐ AI কি "সম্ভবত" বা "নিশ্চিত না" বলেছে? → অবশ্যই verify করুন
- ☐ Link বা URL দিয়েছে? → সেটি সত্যিই কাজ করে কিনা দেখুন

সবচেয়ে গুরুত্বপূর্ণ কথা

AI একটি শক্তিশালী tool, কিন্তু সেটি সর্বজ্ঞ নয়। Critical thinking + AI = সেরা result।

"AI is a brilliant assistant, not an infallible oracle."

Outline & session(Previous)

Topics we will cover:

- ☐ Industrialization/Revolution and aftereffects
- ☐ Current AI Market Hype, Scarcity, and Opportunity
- ☐ How to choose the right skills to learn?
- ☐ How to learn any skills
- ☐ How to prepare for jobs using AI
- ☐ How to market yourself
- ☐ Tools Suggestions

ইন্ডাস্ট্রিয়ালাইজেশন/রেভুলেশন/নতুন প্রোডাক্ট/মার্কেট দখল

সমস্যা

-

সুযোগ

-

আকাঙ্ক্ষা

More Demand → More Output → Need for Mach/tech/innovation

Current AI Market Hype, Scarcity, and Opportunity

- Critical Thinking
- Creativity
- Adaptability
- Communication

How to choose the right skills to learn?

- How to find the right skill
- Which skill to learn first
- How to learn (framework)
- Outline + Roadmap + Routine

How to choose?

- ☐ Identify your interest
- ☐ Check market demand
- ☐ Validate through small project/Keep Exploring

How to learn effectively:

- Make outline before learning
- Create roadmap
- Divide goal into 7-day, 30-day plans
- Learn → Apply → Teach → Repeat

Identifying My Interest:

You are an expert career coach who asks concise self-discovery questions to find a learner's real interests, strengths, and constraints.

Step 1: Ask the user 10 short, focused questions (one per line) that will help reveal:

(a) tasks they enjoy, (b) skills they already have, (c) time they can commit per day/week, (d) preferred work style (remote/office/freelance), (e) long-term goals (salary/impact/entrepreneurship), (f) subjects they dislike, (g) learning preference (video/text/project), (h) language comfort, (i) budget for paid courses, (j) location preferences.

Step 2: After questions, provide instructions telling the user:

"Answer in one-line per question and then paste back for analysis."

Output only the questions, numbered 1-10, no headings or extra commentary.

Follow-up (after you paste answers):

You are an expert career-coach. Based on the user's answers below (JSON or plain lines), produce a table of top 7 candidate skills for the AI era, each with fields: "skill_name", "why_fit" (1-line), "interest_score" (0-10), "time_to_basic" (weeks), "effort_level" (low/medium/high), "first_mini_project_idea". Output as a Markdown table.

2) Check market demand (market validation)

You are a market researcher with web access. For the skill "{{SKILL}}" and region "{{REGION}}" (e.g., Bangladesh, or Remote), do the following:

- 1) Search job boards (LinkedIn, Indeed, bdjobs, Upwork, Fiverr) and report: number of active job postings in last 30 days, three common job titles, and typical required experience.
- 2) Search for freelance gigs and report typical hourly/project rates (give ranges).
- 3) Search Google Trends for last 12 months interest (rising/stable/declining).
- 4) Summarize findings in 5 bullet points and give a final recommendation: High / Medium / Low demand.

Also include 3 links to representative job postings (short URLs).

Output as: JSON with keys: "summary", "job_counts", "freelance_rates", "trends", "links", "recommendation".

If you cannot access the web, explicitly say "NO_WEB".

2B — Offline estimate prompt (if no web access)

You are an analyst estimating market demand without web access. For "{{SKILL}}", provide: 1) proxy indicators to check (what to search: job keywords, Upwork categories, Google Trends queries), 2) typical

demand level globally and in Bangladesh (estimate: High/Medium/Low with justification), 3) 5 practical search queries the user should run themselves to validate (copy-paste ready). Output as a numbered list.

Follow-up: if browsing prompt returns links, ask:

Summarize the three sample job postings in one line each: company, role, required skills, and seniority.

3) Which skill to learn first (skill ranking & decision)

You are an expert career advisor. The user has provided their interest/constraints and candidate skills list (insert here or paste). Using these inputs, rank the top 5 skills by "Overall Suitability Score" (0-100). Score should be based on: interest alignment (40%), market demand (30%), time-to-basic-proficiency (20%), and transferability (10%).

For each skill output: "skill_name", "score", "breakdown" (numbers for each criterion), "recommended_first_project" (one-line), and "why_start_with_this".

Return result as a Markdown table sorted by score desc.

4) Validate through small project (3 validation projects)

You are a project coach. For the skill "{{SKILL}}", propose 3 micro-projects (3-14 days each) for beginners that validate interest and marketability. For each project include:

- Title
- Goal (1 line)
- Deliverable (what to show in portfolio)
- Success metrics (how to measure)
- Tech/Tools needed

- Day-by-day plan (max 14 days)
- Estimated time per day

Output as a numbered list, each project in a clear block.

5) Make outline before learning (syllabus / curriculum)

You are an expert curriculum designer. Create a 3-level syllabus (Beginner, Intermediate, Advanced) for the skill "{{SKILL}}". For each level list 6-8 modules. For each module provide: module title, 1-line outcome, estimated study hours, 2 practical exercises, 1 mini-project idea. Also include 5 free resources and 3 paid courses for each level. Output as JSON.

6) Create roadmap (7-day, 30-day, 90-day)

You are a personal learning coach. Create three progressive roadmaps to reach "basic job-readiness" in "{{SKILL}}":

- A) 7-day Rapid Bootcamp (for {{HOURS_PER_DAY}} hours/day)
- B) 30-day Starter Plan (total hours/week = {{HOURS_PER_WEEK}})
- C) 90-day Job-Prep Plan

For each roadmap include: daily/weekly tasks, deliverables, measurable checkpoints, and one portfolio item to finish. Provide time estimates and two suggested checkpoints for feedback/revision.

Return as sectioned markdown with clear daily checklists.

7) Divide goal into 7-day, 30-day plans (daily checklist + Pomodoro schedule)

You are a productivity coach. For the 30-day plan above, convert week 1 into a daily checklist with timeboxed tasks (use Pomodoro: 25/5 blocks). For each day give: morning learning (topics), afternoon practice (micro tasks), evening reflection/sharing (what to post), and

a 2-line daily KPI. Also include a 5-minute nightly reflection template.
Output as a day-by-day list for 7 days.

8) Learn → Apply → Teach → Repeat (active loop & sharing templates)

You are a learning retention coach. For each module in the beginner syllabus for "{{SKILL}}", produce:

- 1) A 3-minute explainer script for a LinkedIn/Facebook post (bullet points).
 - 2) A 60-sec Reels/TikTok script (hook, 3 steps, CTA).
 - 3) 5 quick quiz questions with answers to self-test.
 - 4) A one-paragraph reflection prompt the learner should fill nightly.
- Return as structured JSON per module.

9) Routine example (customized daily routine)

You are a time-management coach. Create two daily routines for a learner who studies "{{HOURS_PER_DAY}}" hours/day:

- A) Morning person (most productive 6–11 AM)
- B) Night owl (most productive 8–11 PM)

Each routine must include: timeblocks

(learning/practice/project/health/breaks), 1 weekly review session, and a 30-minute "networking/sharing" slot twice a week. Output as two clear schedules.

Prepare for Job Market:

- Need Projects
- Resume
- Soft Skills
- Technical Skills

Prompt #1: Resume Builder Prompt

You are an expert resume writer specializing in ATS-friendly templates.

Create a resume draft for the following profile:

- Name: {{Your Name}}
- Current Role: {{Your Current Role}}
- Target Job Title: {{Job Title (e.g., AI Marketing Specialist / Data Analyst)}}
- Experience: {{Years of Experience}}
- Education: {{Your Degree & University}}
- Skills: {{Your Top Skills}}
- Achievements: {{List if any}}
- Projects: {{Key 2-3 Projects}}
- Contact Info: {{Email / LinkedIn}}

✓ Output Format:

- Summary (2 lines, keyword-optimized)
- Skills (bullet list)
- Experience (each with measurable results)
- Projects (1-line impact statement each)
- Education
- Certifications
- Tools (relevant to job)

Ensure the resume is ATS-compatible, keyword-rich, and tailored to {{Target Job Title}}.

Followup prompt:

Rewrite the previous resume in a clean one-page format suitable for ATS scanners.

Use strong action verbs and quantify achievements (% , \$, numbers).

Output as Markdown table sections for easy copy to Word/Canva.

Prompt #2: Mock Interviewer Prompt

You are a professional interviewer for the role "{{Target Job Title}}".

Ask me 10 realistic interview questions one by one.

After each question, wait for my answer (I'll type it).

Then, score my answer from 1-10 and give a 2-line constructive feedback to improve.

Focus on technical + behavioral + situational questions relevant to the AI industry.

Start by greeting and asking Q1 only.

Follow-up Prompt (after finishing all questions):

Summarize my overall performance. Give:

- Average Score
- 3 Strengths
- 3 Weaknesses
- 5 Personalized improvement tips.

Output as Markdown list.

Bonus Prompt (for video self-practice):

Give me a script to record my answers confidently on camera. Include:

- Eye contact tips
- Voice tone and pause techniques
- Ideal background and lighting setup

Output as step-by-step rehearsal checklist.

Prompt #3: Camera Confidence Coach

You are an AI interview coach and body-language trainer.

I have an upcoming online interview for "{{Target Job Title}}".
Please create a 7-day confidence-building plan to improve:

- Eye contact
- Facial expression
- Voice tone & clarity
- Gesture control
- Background setup
- Avoiding filler words

Each day should include:

- 1 practice exercise,
- 1 self-recording task,
- 1 reflection question.

Output as a daily plan (Day 1–Day 7) in table format.

Follow-up Prompt (for visual feedback):

Give me 5 measurable checkpoints to assess my camera confidence using self-recorded videos.

E.g., eye movement, smile frequency, hand gesture use, speech rate (wpm), filler word count.

Output in a checklist format.

Prompt #5: Job-Readiness Evaluator

You are a job-readiness evaluator for AI-era roles.

Evaluate the user's readiness for "{{Target Job Title}}".

Inputs (resume summary, mock interview feedback, project showcase summary) will be pasted below.

Give me:

- Readiness Score (0–100)
- Strengths (top 3)
- Weak Areas (top 3)
- Recommended actions for next 14 days
- Suggested tools/courses for improvement

Output as a Markdown summary table.

Prompt 1: Personal Branding Identity Generator

You are a personal branding coach for professionals in the tech and creative industry.

Your task: Create a clear and authentic online identity for me.

Context: I'm [your profession or goal, e.g., "a student learning web development & digital marketing"].

Tone: Human, confident, and growth-focused.

Output Format:

1. LinkedIn Headline
2. 2-Line Bio
3. Portfolio Intro Text
4. YouTube Channel Intro (if applicable)

Market Yourself:

- **Social media usage**
- **LinkedIn presence**
- **Content making**

Prompt 2A: Idea Generator Prompt

You are my content strategist for personal branding.

Generate 10 article/post ideas that show my learning journey and skills in [your field: e.g., web dev, marketing, design].

Each idea should be relatable, audience-focused, and have storytelling potential.

Format:

- Title
- 1-line Summary
- Why it's valuable to readers

Prompt 2B: Article Writing Prompt

You are a personal brand content writer.

Write a human, story-driven article based on this topic: [paste your chosen idea].

Target audience: Students & young professionals.

Tone: Relatable, inspiring, practical.

Length: 400–600 words.

Include:

- Hook (1st 2 lines)
- Main insight (core message)
- Real-life example or analogy
- Actionable takeaway

Prompt 3A: Visual Concept Prompt (for Canva or MidJourney)

You are a visual branding designer.

Create 5 image concepts I can design using Canva/MidJourney for a LinkedIn or Facebook post about [your topic].

Each concept should include:

- Visual description
- Style (minimalist, modern, techy, or casual)
- Suggested text overlay
- Color tone suggestion

Prompt 3B: Brand Theme Prompt

Act as a brand identity designer.

Create a cohesive color palette, font combination, and image style guideline for my personal brand as a [your role].

Output format:

1. Primary & secondary colors
2. Font pairing
3. Image mood (e.g., energetic, elegant, minimalist)
4. Example visual caption tone

Prompt 4A: Video Script Generator

You are a short-form video script writer for personal branding.

Write a 45–60 second video script about [your topic or message].

Goal: Share a quick insight or lesson.

Format:

- Hook (first 5 sec)
- Story or explanation (next 30 sec)
- CTA (last 10 sec)

Tone: Friendly, confident, conversational.

Prompt 4B: Caption + Hashtag Prompt

Act as a social media caption writer.

Write 3 caption options and 5 relevant hashtags for this video script:
[paste your script].

Tone: Human, growth-oriented, and easy to read.

Prompt 5A: 30-Day Content Calendar Prompt

You are a content planner for personal branding.

Create a 30-day content calendar for my personal brand as a [your goal or field].

Platform: LinkedIn + Facebook + YouTube Shorts.

Each entry should include:

- Date
- Content Type (Post, Video, Article)
- Topic Idea
- Goal (Inspire / Educate / Showcase)

Prompt 5B: Weekly Reflection Prompt

You are my AI reflection coach.

Ask me 5 powerful reflection questions about my weekly learning and growth.

Goal: To prepare me for writing my next personal branding post.

 **BONUS:**

Prompt 6: AI Summary Prompt (to reuse content)

You are an AI summarizer.

Take this long article or transcript [paste your text]

→ Summarize it into:

1. A LinkedIn post (150 words)
2. A tweet (280 characters)
3. A 1-min video script

Prompt 2: AI Learning Roadmap Builder

You are my AI learning mentor.

Task: Create a 30-day AI learning roadmap for someone learning [your field].

Include:

1. Weekly learning goals
2. Daily 1-hour plan
3. Practical projects using AI tools
4. Reflection or documentation tips

Output Format:

- Week 1: Basics
- Week 2: Application
- Week 3: Projects
- Week 4: Portfolio + Sharing

Image generation

02

Generative AI for Image Creation

Portfolio • Social Media • Presentation Mockup • Visual
Storytelling

Resources Link:

<https://www.clipfly.ai/ai-image-generator/google-gemini-ai-photo-prompt/>

Prompt For ChatGPT and NanoBanana: <https://www.meigen.ai/?category=poster>

Image AI-এর আসল শক্তি কোথায়?

Image AI শুধু সুন্দর ছবি বানানোর জন্য না।

Marketing, branding, UI mockup, campaign concept, presentation design,
product visualization, poster, social post - সব জায়গায় image generation

কাজে লাগে।

Prompt quality = Image quality.

একটি ভাগে prompt থেকে একটি generic, unusable image আসবে।

একটি structured, detailed prompt থেকে professional-grade output আসবে।

Image Prompt Framework

প্রতিটি image prompt-এ এই 9টি **element** থাকলে output সবসময় predictable এবং professional হবে।

Element	Description
Format	1:1, 16:9, 9:16, A4 poster, LinkedIn banner, etc.
Subject	Main subject - person, product, concept, abstract shape, scene
Scene	Background, environment, setting, time of day
Style	Realistic, illustration, flat design, 3D render, cinematic, anime
Lighting	Soft natural, cinematic, studio, neon, golden hour, rim light
Composition	Close-up, wide shot, rule of thirds, centered, bird-eye view
Color	Specific palette - purple/blue gradient, monochrome, brand hex codes
Text	Overlay text if needed - font style, placement, alignment
Output Ratio	Final aspect ratio for the intended platform

Why the framework matters
Without a framework, AI guesses your intent and produces generic results.
With the framework, every element is deliberate - the AI has no room to guess.
Think of it like a design brief: the more specific you are, the closer the output is to what you actually need.

Advanced Prompt 3.1 - Portfolio / LinkedIn Banner

Purpose: Create a professional LinkedIn banner that signals your field and identity at a glance. The banner is the first visual element a recruiter sees on your profile.

Best tool: Nano Banana or Gemini (for image generation)

PROMPT TEMPLATE

Create a professional LinkedIn banner for a [ROLE].

Specs: 1584 x 396 pixels (16:4 ratio)

Subject: Abstract representation of [FIELD] - no human face

Style: Clean, modern, premium tech aesthetic

Color: [COLOR PALETTE] with subtle [PATTERN - e.g., circuit/code patterns]

Text overlay: "[YOUR NAME] | [YOUR ROLE] | [1-2 SKILLS]"

Typography: Sans-serif, white, right-aligned

Mood: Professional, ambitious, tech-forward

No stock photo cliches, no generic handshakes

SAMPLE PROMPT (filled-in example - copy and use directly)

Create a professional LinkedIn banner for a Frontend Developer.

Specs: 1584 x 396 pixels (16:4 ratio)

Subject: Abstract floating UI components - cards, buttons, grids,
subtle lines of code - no human face

Style: Clean, modern, premium tech aesthetic

Color: Deep navy (#0F172A) to electric blue (#3B82F6) gradient
with faint circuit board line patterns in the background

Text overlay: "Rahat Islam | Frontend Developer | React & Figma"

Typography: Bold sans-serif, white text, right-aligned,
name larger than role

Mood: Ambitious, professional, tech-forward

No stock photo cliches, no human figures, no generic handshakes

Output ratio: 16:4

Quick Variations - change one element at a time

Data Analyst version: replace UI components with floating charts, bar graphs,

data points - color: deep green (#064E3B) to teal (#0D9488)

UI/UX Designer version: wireframe sketches, color swatches, design grids

color: warm purple (#7C3AED) to rose (#F43F5E)

Cybersecurity version: binary streams, lock icons, dark grid

color: black (#000) to neon green (#22C55E)

Advanced Prompt 3.2 - Project Thumbnail

Purpose: Generate a striking project thumbnail for your portfolio, GitHub README, or Behance case study. First impressions on portfolio sites are visual - a strong thumbnail dramatically increases click-through.

Best tool: Nano Banana or Gemini (for image generation)

PROMPT TEMPLATE

Create a project thumbnail for a web development portfolio.

Project name: [PROJECT NAME]

Project type: [e.g., E-commerce App / Dashboard / AI Tool]

Ratio: 16:9 (1280x720)

Style: Dark mode UI screenshot aesthetic with floating elements

Color: Dark background ([HEX]) with [COLOR 1] and [COLOR 2] accents

Elements: Abstract UI components, floating cards,
minimal data visualization shapes

Text: "[PROJECT NAME]" large and centered,
"[TECH STACK]" smaller below

Lighting: Soft glow from center, dark edges (vignette effect)

No human figures, no clipart, no generic icons

SAMPLE PROMPT (filled-in example - copy and use directly)

Create a project thumbnail for a web development portfolio.

Project name: ShopFlow

Project type: Full-stack E-commerce Application

Ratio: 16:9 (1280x720)

Style: Dark mode UI screenshot aesthetic with floating 3D elements

Color: Dark background (#0F172A) with purple (#8B5CF6) and
cyan (#06B6D4) accents and a subtle radial glow in the center

Elements: Abstract floating UI cards (product card, cart panel,
checkout form), minimal bar chart, dashed connection lines
between elements - arranged in a dynamic scattered layout

Text: "ShopFlow" large and centered in white bold sans-serif,

"React | Node.js | MongoDB" smaller below in cyan

Lighting: Soft purple glow from center, dark vignette at edges

No human figures, no clipart, no real product images

Output: 16:9

Pro Tip - GitHub README Banner

For GitHub READMEs, use this exact size: 1280x640 (2:1 ratio)

Add this to your prompt: "Add a subtle GitHub-dark color palette."

No text overlay - the project name will be in the README heading."

This keeps your README clean while still looking visually premium.

Advanced Prompt 3.3 - Social Media Poster

Purpose: Design event posters, announcement graphics, and campaign visuals for Instagram, Facebook, or LinkedIn without needing a designer. High-quality social posts drive registration, attendance, and engagement.

Best tool: Nano Banana or Gemini (image) + ChatGPT (text overlay planning)

PROMPT TEMPLATE

Create a 1:1 social media poster for [EVENT/TOPIC].

Occasion: [e.g., Student Tech Workshop / Coding Bootcamp / AI Masterclass]

Target audience: [e.g., University students / Working professionals]

Style: [e.g., Bold and energetic / Minimal and premium / Gen-Z aesthetic]

Color palette: [SPECIFY HEX CODES or color names]

Main visual: [Abstract tech elements / Geometric shapes / Illustration]

Text zones:

- Top: "[ORGANIZATION NAME]" small
- Center: Big bold headline "[EVENT TITLE]"
- Bottom: "[DATE] | [VENUE or ONLINE]"

Font style: Bold, modern, sans-serif

Mood: [Exciting / Professional / Inspiring]

Output: Square (1080x1080)

SAMPLE PROMPT (filled-in example - copy and use directly)

Create a 1:1 social media poster for an AI Masterclass event.

Occasion: AI Masterclass for University Students - free workshop

Target audience: University students (age 18-25), tech and non-tech

Style: Bold, energetic, Gen-Z aesthetic with a clean layout

Premium feel - not cluttered

Color palette: Deep violet (#7C3AED) to electric blue (#3B82F6)

gradient background with gold (#FBBF24) accent lines

Main visual: Abstract AI-themed elements - neural network node pattern

in the background (low opacity), a glowing brain-chip icon

or circuit illustration in the center, light beam effect

Text zones:

- Top left: "Programming Hero" in small white sans-serif
- Center: "AI Masterclass" in very large bold white text,
"Learn to Use AI Like a Pro" subtitle below in light blue
- Bottom: "15 June 2025 | Online via Zoom" in small white text

Font style: Bold, modern, geometric sans-serif (similar to Inter or Poppins)

Mood: Exciting, forward-thinking, premium student event

No stock photos, no human faces, no clipart

Output: Square 1080x1080

Variants for different platforms

Instagram Story (9:16) - change Output to 1080x1920,

stack text vertically, increase font sizes

Facebook Cover (16:9) - change Output to 1200x628,

move text to left side, spread visual right

LinkedIn Post (1.91:1) - change Output to 1200x627,

use a cleaner, more professional tone

Advanced Prompt 3.4 - Personal Branding Visual Identity

Purpose: Build a cohesive personal brand system - not just one image, but a complete visual identity including palette, metaphor, tagline, and ready-to-use image prompts. Use ChatGPT for strategy, then take the output to Nano Banana or Gemini.

Best tool for this prompt: ChatGPT or Claude (strategy and concept) then Nano Banana / Gemini (image generation)

PROMPT TEMPLATE

I want to create a personal brand visual identity for a [ROLE] student.

My skills: [LIST 3-5 SKILLS]

My personality: [e.g., Creative, Analytical, Problem-solver, Empathetic]

Target audience: [e.g., Recruiters and tech companies]

Design a concept for:

1. A color palette (3 colors) with hex codes and usage notes
2. A visual metaphor that represents my professional identity
3. A tagline (under 8 words) that captures my value proposition
4. An image prompt for a profile picture background
5. An image prompt for a portfolio hero banner

Then give me the actual image prompts ready for Nano Banana or Gemini.

SAMPLE PROMPT (filled-in example - copy and use directly)

I want to create a personal brand visual identity for a
Computer Science and Engineering student.

My skills: React, Node.js, UI/UX Design, Python, Data Visualization

My personality: Creative problem-solver, detail-oriented, minimalist
thinker, calm under pressure

Target audience: Tech recruiters, startup founders, and companies
hiring junior full-stack developers

Design a complete brand concept:

1. Color palette: Give me 3 colors with hex codes.

Label each: Primary (dominant), Secondary (supporting),
Accent (highlight for CTAs and icons)

2. Visual metaphor: Choose a concept that connects my technical
skills with my creative personality.

Explain why this metaphor works for my target audience.

3. Tagline: Under 8 words. Should sound confident, not generic.

Avoid cliches like "passionate" or "creative thinker".

4. Profile picture background prompt:

Abstract, minimal, non-distracting. Should look good
with a professional headshot placed on top.

5. Portfolio hero banner prompt (1440x800):

Should immediately communicate what I do and at what quality level.

Output the image prompts in a format I can paste directly
into Nano Banana or Gemini.

How to use the output from this prompt

Step 1: Run this prompt in ChatGPT or Claude.

Step 2: Save the color palette and tagline - use them across all your profiles.

Step 3: Copy the profile picture background prompt into Nano Banana.

Step 4: Copy the hero banner prompt into Gemini or Nano Banana.

Step 5: Use the same palette for your LinkedIn banner (Prompt 3.1),
your project thumbnails (Prompt 3.2), and event posts (Prompt 3.3).

This is how you build a consistent personal brand across platforms.

Common Mistakes to Avoid

Mistake	Why it happens	Fix
---------	----------------	-----

Bad anatomy (wrong fingers, distorted faces)	AI struggles with realistic human anatomy	Use style: illustration or style: 3D render to avoid photorealism
Wrong text rendering (Bengali or complex script)	Image AI cannot render non-Latin scripts accurately	Never ask AI to render Bengali text - add text in Canva or Figma after
Inconsistent character across multiple images	No persistent identity memory between generations	Use a reference image in the prompt for character consistency
Using real brand logos in AI images	Training data does not include licensed IP accurately	Use abstract shapes or your own brand elements only
Misleading deepfakes or fake representations	Powerful tools can produce deceptive content	Ethical responsibility - never create fake identities or misinformation
Vague one-line prompts	AI fills gaps with generic stock-photo aesthetics	Always use the 9-element framework - every element matters

Tools for This Section

 Nano Banana Image Generation	 Gemini Image Editing	 ChatGPT Prompt Writing	 Claude Creative Direction
---	---	---	--

• LinkedIn banners • Project thumbnails • Social media posters • Profile backgrounds	• Image refinement • Style transfer • Add/remove elements • Upscale and enhance	• Draft image prompts • Refine descriptions • Generate variations • Brand strategy (3.4)	• Visual identity strategy • Tagline writing • Brand concept development • Prompt improvement
--	---	--	---

Recommended Workflow
Step 1 Run Prompt 3.4 in ChatGPT or Claude to get your brand system
Step 2 Use the output palette and metaphor for all subsequent visuals
Step 3 LinkedIn banner - Prompt 3.1 in Nano Banana
Step 4 Project thumbnails - Prompt 3.2 in Nano Banana or Gemini
Step 5 Event or social posts - Prompt 3.3 in Nano Banana
Step 6 Refine results in Gemini if adjustments are needed
Step 7 Add Bengali or complex text in Canva after image generation

Final Reminder
Image prompts are iterative. Your first result is a draft, not the final output.
Generate 3-5 variations, then pick the best and refine with a follow-up prompt.
Save your best prompts - they are reusable with small edits for future projects.
Consistency across all your visuals is what makes a personal brand memorable.

Agency Style Photoshoot

```
{
  "prompt": "Professional marketing agency style photoshoot of a young Bangladeshi male model, modern outfit (casual smart – plain shirt or blazer with jeans), confident and approachable expression, standing or sitting in a creative office environment with minimal aesthetic, soft daylight from window, branded workspace background (MacBook, notebooks, coffee mug, creative props), cinematic composition, shallow depth of field, high-end commercial lighting, 4K resolution, captured with DSLR camera, agency brand photoshoot vibe, social media campaign quality.",
  "negative_prompt": "low quality, cartoon, painting, selfie, distorted face, overly saturated colors, messy background, harsh shadows, overexposed lighting, dull expressions, outdated outfit",
  "camera_settings": {
    "lens_type": "35mm commercial lens",
    "aperture": "f/2.0",
    "lighting": "soft diffused studio daylight",
    "composition": "rule of thirds, waist-up or full-body frame"
  },
  "style": {
    "theme": "creative agency workspace",
    "vibe": "modern, confident, energetic, authentic",
    "color_grading": "warm neutral tones with clean highlights",
    "expression": "natural smile or confident focus"
  },
  "output": {
    "resolution": "4K",
    "aspect_ratio": "4:5",
    "background": "modern office setup or co-working space with branding elements"
  }
}
```

Prompt 1 — *Creative Team Brainstorm Vibe*

```
{  
  "prompt": "A group of young marketing professionals in a modern creative agency, collaborating around a table with laptops, post-it notes, and coffee mugs. The atmosphere is energetic and innovative, with warm lighting and soft focus background showing motivational posters. Modern office aesthetics, candid smiles, teamwork vibes."  
}
```

Prompt 2 — *Minimal Agency Headshots*

```
{  
  "prompt": "Professional portrait of a digital marketing strategist in a clean white studio background, wearing smart-casual outfit, confident expression, arms crossed. Soft natural lighting, high-resolution, LinkedIn-style corporate headshot."  
}
```

Prompt 3 — *Behind the Scenes (Creative Setup)*

```
{  
  "prompt": "Behind-the-scenes photoshoot of a creative marketing team working with lighting setup, camera tripod, laptops, and color boards in the background. Studio environment, cinematic lighting, authentic teamwork moment."  
}
```

Prompt 4 — *Modern Branding Session*

```
{  
  "prompt": "A stylish marketing professional standing near a neon-lit agency logo wall, wearing trendy business attire, confident smile, background showing minimalist workspace and brand elements. Perfect for agency promotional materials."  
}
```

Prompt 5 — *Data-Driven Strategy Mood*

```
{  
  "prompt": "Professional photo of a digital marketer presenting  
analytics on a large screen in a modern office. The background shows  
charts, graphs, and branding visuals. Focus on confidence,  
communication, and professionalism."  
}
```

Prompt For ChatGPT and NanoBanana: <https://www.meigen.ai/?category=poster>

AI for Student

03

AI for Students

Advanced Prompt Workflow Guide

Workflow 1: Concept Learning with Layered Prompting

Workflow 2: Exam Preparation System

Workflow 3: NotebookLM Power Usage

Workflow 1: Concept Learning with Layered Prompting

This workflow helps you go beyond simple definitions. Instead of just asking "**what is X?**" you use structured prompts that force deep understanding through analogy, examples, mistakes, and application.

Prompt 2.1 - Layered Concept Breakdown

Purpose: Break down any complex topic into 6 learning layers simultaneously. Best used when you encounter a new chapter or unfamiliar concept.

Best tool: Claude or ChatGPT-4o (long structured output)

PROMPT TEMPLATE

I am a university student learning [TOPIC].

My current level: [BEGINNER / INTERMEDIATE]

My major: [YOUR FIELD]

Teach me this topic using this structure:

1. Simple analogy (relatable to daily student life)
2. Core definition with key terms
3. Step-by-step explanation with examples
4. Common student mistakes and how to avoid them
5. 3 exam-style questions (short answer, MCQ, analytical)
6. One project/task where I can apply this concept today

SAMPLE PROMPT (filled-in example you can copy and use)

I am a university student learning Machine Learning - specifically the concept of Gradient Descent.

My current level: BEGINNER

My major: Computer Science and Engineering

Teach me this topic using this structure:

1. Simple analogy (relatable to daily student life)
2. Core definition with key terms
3. Step-by-step explanation with a numeric example
4. Common student mistakes and how to avoid them
5. 3 exam-style questions (1 short answer, 1 MCQ, 1 analytical)
6. One small coding task I can do today in Python to see it work

Why this works

Analogy activates prior knowledge and reduces cognitive load.

Structured output means you never get a vague or incomplete answer.

Exam-style questions immediately prepare you for assessment.

The practical task ensures you move from theory to application the same day.

Prompt 2.2 - Socratic Learning Mode

Purpose: Instead of passive reading, you actively construct understanding through guided questioning. Ideal for concepts you have partly understood but not fully internalized.

Best tool: Claude (excellent at adaptive back-and-forth dialogue)

PROMPT TEMPLATE

Act as my Socratic tutor for [TOPIC].

Do not explain everything at once.

Ask me one guiding question at a time.

Based on my answer, ask a follow-up question.

If I am wrong, guide me with a hint - do not give the answer directly.

Continue until I reach the correct understanding on my own.

At the end, give me a summary of what I learned

and where I made mistakes.

SAMPLE PROMPT (filled-in example you can copy and use)

Act as my Socratic tutor for Operating Systems - specifically

the topic of Deadlock.

Do not explain everything at once.

Ask me one guiding question at a time.

Based on my answer, ask a follow-up question.

If I am wrong, give me a small hint using a real-life analogy

(like a traffic jam or bank transaction) - do not give the

answer directly.

Continue for about 10 exchanges.

At the end, give me a summary of what I understood correctly

and what gaps I still have. Suggest 2 things I should review.

When to use Layered Prompting (2.1)	When to use Socratic Mode (2.2)
Brand new topic you have never seen	Topic you partially understand
Need structured notes quickly	Want to test your own reasoning
Exam is close - need fast overview	Preparing for viva or oral exam
Teacher explained poorly in class	Concept that confuses you repeatedly
Self-study of a full chapter	Deep understanding needed, not just facts

Workflow 2: Exam Preparation System

Three targeted prompts that replace traditional study guides. Use them in sequence: Plan first (2.3), then predict questions (2.4), then simulate your viva (2.5).

Prompt 2.3 - Smart Study Plan Generator

Purpose: Generate a personalised, day-wise study schedule with built-in revision loops. Removes the stress of planning and lets you focus entirely on studying.

Best tool: ChatGPT-4o or Claude (request table format explicitly)

PROMPT TEMPLATE

I have an exam on [SUBJECT] in [X DAYS].

My syllabus topics:

[LIST ALL TOPICS]

My weak areas: [MENTION IF KNOWN, or write: not sure yet]

Create a day-wise study plan that includes:

- Daily topic breakdown (morning session / evening session)
- Short notes structure for each topic
- 3 most likely exam questions per topic
- Daily revision task (15 min review of previous day)
- Day before exam: revision-only plan
- Exam day morning: 30-minute final prep plan

Format everything as a clean table with checkboxes.

SAMPLE PROMPT (filled-in example you can copy and use)

I have an exam on Data Structures and Algorithms in 7 days.

My syllabus topics:

1. Arrays and Linked Lists
2. Stacks and Queues
3. Trees (Binary Tree, BST, AVL)
4. Graphs (BFS, DFS, Dijkstra)
5. Sorting Algorithms (Merge Sort, Quick Sort, Heap Sort)
6. Hashing and Hash Tables
7. Dynamic Programming (basics: Fibonacci, Knapsack)

My weak areas: Graphs (BFS vs DFS confuses me) and
Dynamic Programming (I do not understand memoization yet).

Create a day-wise study plan that includes:

- Morning session (9am-12pm) and evening session (7pm-9pm)
- Short notes format: definition, diagram, complexity, example
- 3 most likely exam questions per topic
- 15-minute daily revision of previous day
- Day 7 (before exam): full revision, no new material
- Exam morning: 30-minute cheat sheet review plan

Format as a table with checkbox columns for tracking.

Pro Tip - Make it smarter

After you receive the plan, send this follow-up:

"Now identify which 3 topics from this plan are highest priority

based on typical exam weightage for undergraduate DSA. Highlight them and explain why each one is likely to appear."

Prompt 2.4 - Exam Question Predictor

Purpose: Generate a complete set of exam-style questions with a one-page cheat sheet. Mimics the pattern of actual university exams across question types.

Best tool: Claude (most accurate at curriculum-level question generation)

PROMPT TEMPLATE

Subject: [SUBJECT NAME]

Chapter/Topic: [CHAPTER OR TOPIC]

Exam type: [FINAL EXAM / MID TERM / VIVA]

University level: [UNDERGRADUATE / GRADUATE]

Based on standard university curriculum and common exam patterns:

1. Generate 5 likely short questions (2-3 marks)
2. Generate 3 likely long analytical questions (10+ marks)
3. Generate 5 MCQ questions with answer and explanation
4. Identify the 3 most important definitions to memorize
5. Create a one-page revision cheat sheet for this topic

SAMPLE PROMPT (filled-in example you can copy and use)

Subject: Computer Networks

Chapter/Topic: TCP/IP Model and OSI Model (Layers, Functions,
Protocols at each layer)

Exam type: FINAL EXAM

University level: UNDERGRADUATE

Based on standard university curriculum and common exam patterns:

1. Generate 5 likely short questions (2-3 marks each)
2. Generate 3 likely long analytical questions (10-15 marks each)
 - Include one comparison question (OSI vs TCP/IP)
 - Include one problem-solving question with a scenario
3. Generate 5 MCQs with the correct answer and a one-line explanation of why the other options are wrong
4. List the 3 most important definitions I must memorize word-for-word
5. Create a one-page cheat sheet with: layer names, key protocols at each layer, and one real-world example per layer

Follow-up Prompt for Deeper Practice

After receiving the questions, send this:

"I will now answer Question 2 (the long analytical question).

Please wait for my full answer. Then evaluate it and give me:

- Score out of 10

- What I got right

- What was missing

- The model answer I should study"

Prompt 2.5 - Viva Examiner Mode

Purpose: Simulate a real viva examination with adaptive difficulty, instant feedback, and a performance summary. The single most effective tool for viva preparation.

Best tool: Claude (superior at maintaining examiner persona and progressive difficulty)

PROMPT TEMPLATE

Act as a strict university viva examiner for [SUBJECT / TOPIC].

My project/thesis topic: [IF APPLICABLE, else write: general subject viva]

Conduct my viva interview:

1. Ask one question at a time - start easy, then increase difficulty

2. After my answer, give me:

- Score: [X/10]

- What was correct

- What was missing or wrong

- The ideal answer in 3-4 lines

3. Ask 10 questions total across difficulty levels:

Questions 1-3: Definition and basic recall

Questions 4-7: Application and scenario-based

Questions 8-10: Analysis and critical thinking

4. At the end, give an overall performance summary

and 3 specific areas I must improve before my actual viva.

SAMPLE PROMPT (filled-in example you can copy and use)

Act as a strict university viva examiner for my Final Year Project.

My project topic: A web-based student attendance system using

facial recognition with Python (OpenCV) and Flask backend.

Conduct my viva interview:

1. Ask one question at a time - start easy, increase difficulty

2. After each of my answers, give me:

- Score: [X/10]
- What I answered correctly
- What was incomplete or technically wrong
- The ideal answer a top student would give (3-5 lines)

3. Cover these areas across 10 questions:

Q1-3: Basics (why facial recognition, what is OpenCV, Flask basics)

Q4-6: Technical depth (haar cascade vs deep learning, database schema,
API design)

Q7-9: Problem-solving (what if lighting is poor, how to handle
duplicate attendance, scalability beyond 500 students)

Q10: Critical - what would you do differently if you rebuilt this?

4. End with: overall score, performance level, and top 3 weak points

I must study before my actual viva next week.

Advanced Viva Add-on Prompt

After the 10-question viva, send this for extra preparation:

"Now play devil's advocate. Ask me 3 intentionally tricky questions

designed to expose gaps in my project logic or methodology.

These should be the type that trip up even well-prepared students."

Workflow 3: NotebookLM Power Usage

What is NotebookLM? Google's NotebookLM is a research assistant that works exclusively from your uploaded documents. It does not hallucinate from outside knowledge. Every answer is grounded in your own lecture slides, textbook chapters, or notes.

What to Upload

Lecture PDFs from your teacher

Textbook chapters (specific sections, not the whole book)

Your own handwritten or typed class notes (scan or type)

Past exam papers from previous years

Lab reports and assignment rubrics

Why NotebookLM instead of ChatGPT for this workflow?

Zero hallucination - all answers cite your uploaded material directly

Source references appear so you know exactly which page the answer came from

Ideal for closed-book style study where only your course materials matter

Can cross-reference multiple documents in a single question

01 Summary Prompt

PROMPT TEMPLATE

Summarize the most important concepts from the uploaded materials.

Focus on what is most likely to appear in exams.

Structure the summary as:

- Top 5 key concepts with one-line definitions
- Most important formulas or frameworks
- 3 concepts that are frequently misunderstood

SAMPLE PROMPT (filled-in example you can copy and use)

Summarize the most important concepts from the uploaded Operating

Systems lecture notes (Week 1 to Week 8).

Focus on what is most likely to appear in a final exam.

Structure as:

- Top 5 key concepts with one-line definitions
- Core formulas (e.g. CPU scheduling calculations, page fault rates)
- 3 concepts students typically confuse (e.g. paging vs segmentation)

02 Compare Prompt

PROMPT TEMPLATE

Compare [Chapter X] and [Chapter Y].

Create a side-by-side comparison table covering:

- Definition
- Key differences
- When each is used

- Example from the uploaded materials

SAMPLE PROMPT (filled-in example you can copy and use)

Compare Chapter 3 (Process Scheduling) and Chapter 5 (Memory Management) from the uploaded textbook.

Create a side-by-side comparison table covering:

- Core definition
- Main goal of each concept
- Key algorithms covered in each chapter
- One example from the uploaded lecture slides for each
- Which one is more likely to have a numerical problem in the exam

03 Question Generator Prompt

PROMPT TEMPLATE

Generate questions based strictly on the uploaded content:

- 10 short answer questions (2-3 marks level)
- 5 analytical questions (10+ marks level)
- 10 MCQ questions with 4 options each

After each question, cite the source page or section from the uploaded document where the answer can be found.

SAMPLE PROMPT (filled-in example you can copy and use)

Generate exam questions based strictly on the uploaded Computer Networks past papers and the Chapter 4 (Transport Layer) notes:

- 10 short answer questions at 2-3 mark level
- 5 analytical questions at 10-15 mark level
(include at least one scenario-based problem)
- 10 MCQ questions with 4 options each

After each question, cite the exact page number or slide number from the uploaded materials where the answer is located.

04 One-Page Revision Sheet Prompt

PROMPT TEMPLATE

Create a one-page revision sheet from all uploaded materials.

Include:

- Key terms and definitions (alphabetical)
- Important formulas and their use cases
- Critical diagrams described in text (if any)
- 5 most important points to remember for the exam

SAMPLE PROMPT (filled-in example you can copy and use)

Create a one-page revision sheet from all uploaded Database Management Systems materials (Chapter 1 to 6).

Include:

- All key terms and definitions in alphabetical order
- SQL command syntax (SELECT, JOIN, GROUP BY, HAVING)
- Normalization rules (1NF, 2NF, 3NF, BCNF) with simple examples
- ER diagram notation guide (entities, attributes, relationships)

- 5 most important points that appear across multiple chapters

Keep it printable on one A4 page - be concise.

05 Gap Analysis Prompt

PROMPT TEMPLATE

I understand [TOPIC A] but I am confused about [TOPIC B].

Using only the uploaded documents:

1. Explain Topic B step by step
2. Show how Topic B connects to Topic A (which I already know)
3. Give me 2 examples from the uploaded material
4. Write 2 practice questions specifically on Topic B

SAMPLE PROMPT (filled-in example you can copy and use)

I understand Process Scheduling (Round Robin, FCFS, SJF) fairly well but I am confused about Deadlock - specifically how the Banker's Algorithm works.

Using only the uploaded Operating Systems lecture slides:

1. Explain the Banker's Algorithm step by step
2. Connect it to what I know about process states and scheduling
3. Walk through 2 examples from the uploaded slides (if available)
4. Write 2 exam-level practice questions specifically on Banker's Algorithm at a 10-mark question level

Recommended Tools for These Workflows

 ChatGPT Learning and Planning	 Claude Deep Explanation and Viva	 NotebookLM Source-Based Study
• Study plan generation • Structured concept breakdown • Brainstorming topics • Table and checklist format output	• Socratic learning mode • Viva simulation • Long-form analytical answers • Code explanation and debugging	• Upload your own materials • Zero hallucination - cited answers • Compare chapters • Generate questions from your notes

Recommended Workflow Order

Step 1 Upload your materials to NotebookLM first (Workflow 3)

Step 2 Use NotebookLM Summary Prompt to get an overview

Step 3 Use Prompt 2.1 (Layered Breakdown) for new or unclear topics

Step 4 Use Prompt 2.2 (Socratic Mode) to test your understanding

Step 5 Generate your study plan with Prompt 2.3

Step 6 Predict exam questions with Prompt 2.4

Step 7 Simulate your viva with Prompt 2.5 two days before the exam

Final Reminder

These prompts are starting points. After each AI response, ask a follow-up.

The more context and detail you give, the more tailored the output.

Always verify facts from AI using your official textbook or lecturer notes.

Use NotebookLM for source-grounded answers. Use Claude/ChatGPT for creative reasoning, explanation, and simulation tasks.

AI for Learning New skill

04

Generative AI for Learning Skills

যেকোনো skill শেখার জন্য AI-based personalized roadmap

i

Key Message

Skill শেখার সবচেয়ে বড় সমস্যা হলো মানুষ জানে না কোথা থেকে শুরু করবে, কীভাবে practice করবে এবং progress measure করবে। AI এখানে mentor-এর মতো কাজ করে — কিন্তু practice student-কেই করতে হবে।

Skill Learning Framework: Learn → Practice → Build → Review → Improve → Publish

এই 6-step framework students দেব বুঝতে হবে:

1. Learn	Concept বুঝবে — AI দিয়ে, tutorial দিয়ে, documentation দিয়ে
2. Practice	ছোট isolated tasks করবে — exercises, challenges, drills
3. Build	Mini project বানাবে — real problem solve করার attempt
4. Review	AI দিয়ে code/work review নেবে — improvement areas identify করবে
5. Improve	Feedback implement করবে — refactor, redesign, rewrite
6. Publish	GitHub, portfolio তে publish করবে — visible proof of work

Advanced Prompts for Skill Learning

Advanced Prompt 4.1 — Personalized Skill Roadmap

PROMPT

I want to learn [SKILL NAME — e.g., Frontend Development / Data Analysis / UX Design]. My current level: [COMPLETE BEGINNER / SOME BASICS / INTERMEDIATE] Available time: [X HOURS PER DAY] My goal: [e.g., Get a job / Build a freelance portfolio / Personal project] Timeline: [30 / 60 / 90 DAYS] Create a detailed learning roadmap that includes: 1. Week-by-week topic breakdown 2. Daily learning schedule (what to study, what to practice) 3. Mini projects for each milestone (not just tutorials) 4. Resources to use (free preferred) 5. Skills to avoid at this stage (to prevent overload) 6. How to use AI as a learning tool without becoming dependent 7. Checkpoints: how to know if I am ready for the next stage 8. Common mistakes beginners make — and how to avoid them

Advanced Prompt 4.2 — Daily Practice Generator

PROMPT

I am learning [SKILL] and I am at [STAGE/WEEK X] of my roadmap. Topics I have completed: [LIST] Today's topic: [TODAY'S TOPIC] Generate a complete daily practice session: 1. 10-minute warm-up: review question from yesterday's topic 2. 30-minute learning: explain today's concept with example 3. 20-minute practice: give me 3 progressive exercises (easy → hard) 4. 15-minute project task: one small feature/task for my current project 5. 5-minute reflection: ask me what I understood and what confused me After I answer the reflection, tell me what to focus on tomorrow.

Advanced Prompt 4.3 — AI Code / Work Reviewer

PROMPT

I am a [BEGINNER / INTERMEDIATE] [SKILL] learner. I just completed this task: [DESCRIBE TASK] Here is my work: [PASTE YOUR CODE / WRITING / DESIGN DESCRIPTION] Review my work on these criteria: 1. Correctness — does it work / is it accurate? 2. Best practices — what should I change to follow standards? 3. Efficiency — any better/shorter approach? 4. Readability — is it clean and understandable? 5. What I did well — genuine positives 6. Top 3 improvements for next time 7. Refactored version — show me the improved version Explain everything at my current learning level.

Advanced Prompt 4.4 — Skill Gap Identifier

PROMPT

I want to work as a [TARGET ROLE — e.g., Junior Frontend Developer / Junior Data Analyst]. My current skills: [LIST WHAT YOU KNOW] My experience: [PROJECTS, INTERNSHIPS, COURSES] Time available: [X MONTHS] Analyze my profile and: 1. List the skills I already have that are relevant to this role 2. Identify the top 5 skill gaps I need to fill 3. Prioritize the gaps — which to tackle first? 4. Suggest one portfolio project that would demonstrate multiple skills at once 5. Tell me what a hiring manager for this role actually looks for 6. Give me a 90-day plan to become job-ready

Generative AI for Portfolio and Projects

Project Idea to Portfolio-Ready Deliverable

Includes: Prompt Generator Website - full practical build guide

Each prompt includes a Template and a filled-in Sample

Portfolio = Proof of Work

Job market-এ certificate alone enough না।

Portfolio হলো proof of work।

AI দিয়ে project বানানো যায়, কিন্তু portfolio strong হয় তখনই যখন

problem, solution, process, tech stack, features, learning

এবং result properly show করা হয়।

AI তোমার speed বাড়াবে - কিন্তু thinking, structure এবং

presentation তোমার নিজের হতে হবে।

Portfolio Project Building Workflow

Step	Phase	What to do
01	Problem Selection	AI দিয়ে real-world problem identify করো যা solve করার মতো
02	Idea Validation	Target users, problem-solution fit, এবং feasibility check করো
03	Feature Breakdown	MVP vs advanced features clearly define করো
04	UI and UX Planning	Pages, user flow, copy, CTA plan করো before coding
05	Development	Code generation, debugging, refactoring-এ AI ব্যবহার করো
06	Documentation	GitHub README, case study, এবং presentation তৈরি করো
07	Publication	Live demo deploy করো, screenshots নাও, GitHub link শেয়ার করো

Advanced Prompts - Project Building

Prompt 5.1 - Project Idea Generator

Purpose: Generate 10 high-impact portfolio ideas with full context so you can immediately evaluate and pick one to build. Avoids generic todo-app suggestions.

Best tool: ChatGPT or Claude

PROMPT TEMPLATE

Generate 10 portfolio project ideas for a [ROLE].

Criteria:

- Each project should solve a real student or local community problem
- Should be completable in [2-4 WEEKS] solo
- Should demonstrate skills employers look for

For each idea provide:

1. Problem statement (1-2 sentences)
2. Target users
3. Core features (5-7)
4. Tech stack recommendation
5. Difficulty level (Beginner / Intermediate / Advanced)
6. Portfolio impact: what this demonstrates to a recruiter
7. Unique twist: how to make it stand out from generic projects

SAMPLE PROMPT (filled-in example - copy and use directly)

Generate 10 portfolio project ideas for a beginner web developer who knows HTML, CSS, JavaScript, React, and basic Node.js.

Criteria:

- Each project should solve a real problem for university students or small local businesses in Bangladesh
- Should be completable in 3 weeks solo
- Should demonstrate skills that impress junior developer recruiters

For each idea provide:

1. Problem statement (1-2 sentences)
2. Target users
3. Core features (5-7 bullet points)
4. Tech stack: React frontend + Node/Express backend + MongoDB
5. Difficulty level (Beginner / Intermediate / Advanced)
6. Portfolio impact: one sentence on what a recruiter will see
7. Unique twist: one feature that makes it different from every other version of this idea on GitHub

Prompt 5.2 - MVP Feature Breakdown

Purpose: Turn a vague project idea into a precise engineering plan with database schema, user flow, API list, and a realistic timeline. Prevents scope creep and builds-for-show problems.

Best tool: Claude (best for structured technical planning)

PROMPT TEMPLATE

Project idea: [PROJECT NAME AND DESCRIPTION]

My tech stack: [LIST YOUR STACK]

My timeline: [X WEEKS]

My level: [BEGINNER / INTERMEDIATE]

Break this project down completely:

1. MVP features (must-have for a working demo - max 5-7)
2. Phase 2 features (nice-to-have - add after MVP is done)
3. Database schema (tables, fields, relationships)

4. Application pages/screens (with purpose of each)
5. User flow (text format, step by step)
6. API endpoints needed (method, route, purpose)
7. Development milestones with estimated time per milestone
8. Top 3 features to demo in a portfolio presentation

SAMPLE PROMPT (filled-in example - copy and use directly)

Project idea: AI Prompt Generator - a web app where users select options (role, format, tone, length) and the app generates a ready-to-use AI prompt for text, image, or code tasks.

My tech stack: React (frontend), Node.js + Express (backend),
OpenAI API or Anthropic API, MongoDB (save prompts)

My timeline: 3 weeks

My level: INTERMEDIATE

Break this project down completely:

1. MVP features - only what is needed for a working demo
2. Phase 2 features - after MVP is live
3. Database schema - users, saved prompts, prompt history
4. All pages: Landing, Generator (3 tabs), Result, Saved Prompts, About
5. Full user flow from landing to copying the generated prompt
6. API endpoints for: generate prompt, save prompt, get saved, delete saved
7. Week-by-week milestone plan (3 weeks total)
8. Which 3 features would impress a recruiter most in a demo

Prompt 5.3 - GitHub README Generator

Purpose: Write a recruiter-friendly GitHub README that tells your project's story clearly. A strong README is the difference between a recruiter clicking your repo or closing the tab.

Best tool: Claude or ChatGPT

PROMPT TEMPLATE

Write a professional GitHub README for my project.

Project details:

- Name: [PROJECT NAME]
- Description: [2-3 sentences about what it does]
- Problem it solves: [BRIEF PROBLEM STATEMENT]
- Tech stack: [LIST ALL TECHNOLOGIES]
- Key features: [LIST 5-7 FEATURES]
- Live link: [PLACEHOLDER OR REAL LINK]
- My role: [Solo developer / Team lead / etc.]

README must include:

1. Project banner placeholder note
2. Short description with problem it solves
3. Tech stack badges section
4. Features list with brief descriptions
5. Screenshots section (placeholder)
6. Installation and setup steps

7. Live demo section
8. What I learned (3-5 points)
9. Future improvements (3-5 items)
10. Contact section

Use clean Markdown. Make it recruiter-friendly.

SAMPLE PROMPT (filled-in example - copy and use directly)

Write a professional GitHub README for my project.

Project details:

- Name: PromptCraft
- Description: A web app that generates ready-to-use AI prompts for text, image, and code tasks. Users select their requirements through a guided form and receive a structured prompt instantly.
- Problem it solves: Most people write vague, ineffective AI prompts. PromptCraft removes the guesswork.
- Tech stack: React, Tailwind CSS, Node.js, Express, MongoDB, Anthropic Claude API
- Key features: Text prompt builder (6 parameters), Image prompt builder (9 elements), Code prompt builder, Save and copy prompts, Prompt history, Dark mode UI
- Live link: <https://promptcraft.vercel.app> (placeholder)
- My role: Solo developer - full-stack

README must include all 10 standard sections.

Use Markdown badges for the tech stack.

Keep tone confident and specific - not generic.

Write the "What I Learned" section as genuine reflection,
not a list of buzzwords.

Prompt 5.4 - Portfolio Case Study Writer

Purpose: Write the narrative that goes on your personal portfolio website or Notion page. A case study shows thinking process, not just output - it is what separates strong candidates from average ones.

Best tool: Claude (best for narrative writing and tone control)

PROMPT TEMPLATE

Write a compelling portfolio case study for this project.

Project: [NAME]

Problem: [THE REAL PROBLEM IT SOLVES]

My role: [SOLO DEV / ROLE IN TEAM]

Tech stack: [LIST]

Timeline: [HOW LONG IT TOOK]

Key challenges faced: [LIST 2-3]

Structure the case study as:

1. Project Overview (2-3 sentences - hook the reader)
2. The Problem (why this exists, who it is for)
3. My Approach (how I planned and started)
4. Technical Decisions (key choices I made and why)

5. Challenges and Solutions (show problem-solving ability)
6. Features Showcase (top 3 features with why they matter)
7. Results and Metrics (what the project achieved)
8. What I Learned (honest self-reflection)
9. If I could rebuild it (shows growth mindset)

Tone: Confident, honest, specific - not generic.

Audience: Technical recruiters and developers.

SAMPLE PROMPT (filled-in example - copy and use directly)

Write a compelling portfolio case study for this project.

Project: PromptCraft

Problem: Most people write ineffective AI prompts because they
do not know what inputs to include. PromptCraft solves
this by turning prompt engineering into a guided form.

My role: Solo full-stack developer

Tech stack: React, Tailwind CSS, Node.js, Express,
MongoDB, Anthropic Claude API

Timeline: 3 weeks (first week planning, two weeks building)

Key challenges:

1. Designing the prompt generation logic so output feels
natural, not robotic
2. Handling API rate limits and errors gracefully
3. Making the 3-tab UI (Text/Image/Code) feel intuitive
without overwhelming the user

Structure the case study with all 9 sections.

Section 5 (Challenges) should show actual technical thinking,
not just "it was hard but I figured it out".

Section 9 (If I could rebuild it) should be genuinely honest.

Tone: Confident, honest, specific - write like a developer
explaining their work to a senior engineer, not to a salesperson.

Prompt 5.5 - Code Review and Improvement

Purpose: Get a thorough code review before publishing to GitHub or showing in an interview. Catches security issues, bad patterns, and readability problems that a recruiter or senior dev would notice immediately.

Best tool: Claude or ChatGPT (paste code directly)

PROMPT TEMPLATE

Review this code I wrote for my portfolio project:

[PASTE YOUR CODE HERE]

I am a [BEGINNER / INTERMEDIATE] developer working on [PROJECT TYPE].

Please:

1. Identify bugs or errors (if any)
2. Point out security issues (especially for web apps)
3. Suggest better patterns or approaches
4. Check code readability and naming conventions

5. Identify performance issues
6. Rewrite the most problematic section with explanation
7. Final verdict: Is this portfolio-ready?

What is the single most important thing to fix first?

SAMPLE PROMPT (filled-in example - copy and use directly)

Review this code I wrote for my portfolio project:

```
// API route for generating a prompt
app.post("/api/generate", async (req, res) => {
  const { role, format, length, topic } = req.body;
  const prompt = `Write a ${format} about ${topic}`,
    `for a ${role}. Length: ${length}.`;
  const result = await anthropic.messages.create({
    model: "claude-sonnet-4-20250514",
    max_tokens: 500,
    messages: [{ role: "user", content: prompt }]
  });
  res.json({ output: result.content[0].text });
});
```

I am an INTERMEDIATE developer working on a full-stack
prompt generator web app (Node.js + Express backend).

Please check for:

1. Missing input validation and sanitization
2. Missing error handling (what if the API call fails?)

3. Any security issues (is req.body safe to use directly?)

4. Better async/await patterns

5. Should I add rate limiting to this endpoint?

6. Rewrite the route with all fixes applied

7. Is this production-ready or just portfolio-ready?

What is the one thing I must fix before showing this?

Practical Build Guide: Prompt Generator Website

Project Overview - PromptCraft

A web app where users select their requirements through a guided form and receive a structured, ready-to-use AI prompt instantly.

Three modes: Text Prompt Builder, Image Prompt Builder, Code Prompt Builder.

Target users: Students, content creators, developers, marketers, and anyone who uses AI tools regularly.

Why this is a strong portfolio project:
- Demonstrates API integration (Anthropic / OpenAI)
- Demonstrates UI/UX thinking (complex form design)
- Demonstrates full-stack skills (React + Node.js + MongoDB)
- Solves a real problem that any AI user can relate to

Input Fields - Text Prompt Builder

These are the fields the user fills in to generate a text prompt. Each field maps directly to a prompt engineering principle.

Text Mode - UI Fields and Options		
Input Field	UI Type	Options / Notes
Role	Dropdown	Student / Professional / Expert / Creative Writer / Marketer / Teacher
Age Group	Dropdown	13-18 / 18-25 / 25-40 / 40+ / General (all ages)
Knowledge Level	Dropdown	Complete Beginner / Intermediate / Advanced / Expert
Audience	Dropdown	Self / Small Group / Class / Social Media / Professional Team
Format	Dropdown	Paragraph / Bullet Points / Step-by-Step / Table / Email / Social Post / Essay / Summary

Length	Dropdown	Very Short (50 words) / Short (150 words) / Medium (300 words) / Long (600+ words)
Prompting Technique	Dropdown	Standard / Role-Based / Chain of Thought / Few-Shot / Constraint-Based / Socratic
Topic / Task	Textarea	Free text - what the user wants to write or explain (required field)
Tone	Dropdown	Formal / Conversational / Friendly / Persuasive / Neutral / Humorous
Language	Dropdown	English / Bangla / Banglish (mixed)

How the generated text prompt looks

Example: User selects Role=Professional, Level=Intermediate,

Format=Email, Length=Short, Technique=Constraint-Based,

Topic="write a follow-up email after a job interview"

Generated prompt output:

"Act as a professional business communication expert.

Write a concise follow-up email after a job interview.

Constraints: under 150 words, formal tone, one specific detail

from the interview, clear next-step CTA.

Audience: HR manager or hiring director.",

Input Fields - Image Prompt Builder

Image prompt engineering is different from text. The goal is natural, realistic, emotionally resonant images. Every field below directly improves image quality.

Input Field	UI Type	Options / Notes
Subject	Textarea	Who or what is in the image - be specific (person, object, scene)
Emotion / Mood	Dropdown	Joyful / Melancholic / Tense / Calm / Nostalgic / Dramatic / Hopeful / Lonely
Environment	Textarea	Location, setting, background - indoor, outdoor, urban, nature, abstract
Time of Day	Dropdown	Golden Hour (sunrise/sunset) / Midday / Overcast / Night / Twilight / Interior lighting
Lighting Style	Dropdown	Soft natural / Cinematic / Studio / Rim light / Neon / Candlelight / Diffused window light
Camera Style	Dropdown	Portrait lens (85mm) / Wide angle / Close-up macro / Over-the-shoulder / Eye-level / Low angle
Photography Style	Dropdown	Documentary / Editorial / Fine art / Street photography / Cinematic film still / Fashion
Color Palette	Dropdown	Warm (orange, amber) / Cool (blue, teal) / Desaturated / High contrast / Pastel / Monochrome

Texture / Detail	Dropdown	Hyper-realistic / Film grain / Painterly texture / Clean digital / Vintage / Sharp crisp
Output Ratio	Dropdown	1:1 Square / 16:9 Landscape / 9:16 Portrait / 4:3 / 3:2
Avoid	Checkbox	Cartoon / 3D render / Illustration / Text overlay / Logos / Distorted faces

Emotion + Lighting + Time of Day = the feel of the image
"Golden hour + soft natural light + joyful" produces warm, human, emotionally rich images that feel lived-in, not staged.
Camera Style + Photography Style = the visual language
"Portrait lens + documentary" feels real and intimate.
"Wide angle + cinematic film still" feels epic and narrative.
Texture + Color = the mood without words
"Desaturated + film grain" = melancholic, raw, honest.
"Warm palette + sharp crisp" = energetic, optimistic, commercial.
The Avoid field prevents AI from defaulting to its generic stock-photo or cartoon aesthetic.

SAMPLE PROMPT (filled-in example - copy and use directly)

-- Example: Image generated from the builder --

Subject: A young woman sitting alone at a cafe window,
looking outside at rain, holding a coffee cup with
both hands, slight reflection in the glass

Emotion: Melancholic, introspective, calm

Environment: Cozy indoor cafe, warm interior, rain visible outside

Time of Day: Overcast afternoon, diffused grey natural light

Lighting: Soft diffused window light from the left side,
warm interior lamp in background

Camera: Portrait lens (85mm), shallow depth of field,
subject sharp, background softly blurred

Photography Style: Fine art / cinematic film still

Color Palette: Desaturated with warm amber interior tones,
cool blue-grey from the rainy window

Texture: Film grain, slightly soft - not hyper-sharp

Ratio: 3:2

Avoid: Cartoon, 3D render, text overlay, stock photo cliches,
distorted anatomy

Input Fields - Code Prompt Builder

Code prompts need precision. Vague code prompts produce vague code. These fields ensure the AI has all technical context before writing a single line.

Code Mode - UI Fields and Options

Input Field	UI Type	Options / Notes
Language	Dropdown	JavaScript / TypeScript / Python / React / Node.js / SQL / CSS / Bash / Other
Framework/Library	Dropdown	React / Express / Next.js / Django / FastAPI / TailwindCSS / Prisma / None
Task Type	Dropdown	Write new function / Debug existing code / Refactor / Add feature / Write test / Explain code / Optimize
Describe the task	Textarea	What should the code do? Be specific - include inputs, outputs, and constraints
Input	Textarea	What data does the function receive? (type, format, example)
Output	Textarea	What should it return? (type, format, example)
Edge Cases	Textarea	What should happen for empty input, null, errors, large data?
Error Handling	Dropdown	None / Try-catch / Return error object / Throw exception / Custom error class
Code Style	Dropdown	Clean and readable / Performance-optimized / Minimal / Well-commented / Production-ready
Comments	Dropdown	No comments / Inline comments only / Full JSDoc / Explain each block
Paste your code	Code Editor	Optional - paste existing code for debugging, refactoring, or adding features

SAMPLE PROMPT (filled-in example - copy and use directly)

-- Example: Code prompt generated from the builder --

Language: JavaScript (Node.js)

Framework: Express

Task: Write a new Express middleware function

Describe: Create a rate limiting middleware that tracks how many times an IP address has called /api/generate in the last 60 seconds. If the IP exceeds 10 requests per minute, return a 429 error with a retry-after header.

Input: Express req, res, next objects

Output: Calls next() if under limit, sends 429 JSON if over limit

Edge Cases: Handle missing IP (use req.ip fallback),
reset count after 60 seconds automatically

Error Handling: Return error object with status, message, retryAfter

Code Style: Clean and readable, production-ready

Comments: Inline comments explaining each decision

Do not use any external npm packages.

Use an in-memory Map to store IP counts and timestamps.

MVP Plan - 3-Week Build Timeline

Step	Phase	What to do
W1 D1-2	Setup and Design	Project scaffold (React + Node.js), folder structure, Tailwind setup, figma wireframe for 3-tab layout
W1 D3-5	Text Builder UI	Build all Text mode dropdowns and textarea, form state management, static preview of output
W2 D1-2	API Integration	Connect Anthropic API, build /api/generate endpoint, handle text prompt assembly and API call
W2 D3-5	Image and Code Mode	Build Image mode input fields, build Code mode input fields, connect both to generation API
W3 D1-2	Save and History	MongoDB setup, save prompt schema, save/copy/delete UI, prompt history page
W3 D3-4	Polish and Deploy	Dark mode, mobile responsiveness, error states, loading states, Vercel deploy
W3 D5	Portfolio Assets	Screenshots, README, case study, demo video (Loom), GitHub cleanup

MVP Features (build first)	Phase 2 Features (after launch)
3-tab mode switcher (Text / Image / Code) All input fields for each mode Generate button calling the API Copy to clipboard button Basic prompt history (last 10) Responsive layout for mobile Dark mode toggle	User authentication (save prompts to account) Prompt rating system (thumbs up/down) Community shared prompts gallery Prompt templates library Export to Notion or Google Docs Prompt comparison (try 2 variants) Chrome extension version

Portfolio Presentation - Top 3 Features to Demo
1. Live Prompt Generation: Show user filling the Text Builder form
and receiving a structured, professional prompt in real time.

This demonstrates API integration and UX thinking together.
2. Image Prompt with Visual Result: Fill the Image Builder, generate
the prompt, then paste it into an image AI live and show the output.
This is the most visually impressive demo moment.
3. Saved Prompts and History: Show that prompts are saved to MongoDB,
appear in history, and can be copied or deleted.
This demonstrates full-stack CRUD and database skills.

Portfolio Project Categories

এই ধরনের projects portfolio-তে সবচেয়ে বেশি impact করে:

High Impact Projects	Skill Areas They Demonstrate
----------------------	------------------------------

Student management / course platform	Auth, CRUD, role-based access
Personal expense and budget tracker	Data viz, charts, local storage
AI-powered study assistant	API integration, NLP, AI tools
Job application tracker	Kanban UI, state management
Portfolio website with CMS	CMS, markdown, dynamic routing
Local business landing with booking	Forms, calendars, email notifications
Blog and content management system	Rich text editor, media upload
Marketing analytics dashboard	Chart libraries, data aggregation
Event registration system	Payment/registration flow, QR
E-commerce product showcase	Cart, filter, product search
Prompt generator (this guide)	AI API, form logic, full-stack

Tools for This Section

 ChatGPT Ideation and Docs	 Claude Case Study and README	 Antigravity Coding Support	 Nano Banana Visual Assets
• Project idea generation • README drafts • Brainstorming features • User story writing	• Case study writing • Code review • Technical planning • MVP breakdown	• Code generation • Debugging help • Refactoring • Component building	• Project thumbnails • Portfolio banners • Social share images • Mockup visuals

Recommended End-to-End Workflow for PromptCraft

- Step 1 Run Prompt 5.1 to validate PromptCraft as a project idea
- Step 2 Run Prompt 5.2 to get the full MVP breakdown and timeline
- Step 3 Build the project using Antigravity for coding support
- Step 4 Run Prompt 5.5 on key files before publishing to GitHub
- Step 5 Run Prompt 5.3 to generate the GitHub README
- Step 6 Run Prompt 5.4 to write the portfolio case study
- Step 7 Use Nano Banana with Prompt 3.2 (Image Guide) for thumbnail
- Step 8 Deploy on Vercel, link in your LinkedIn and portfolio site

Final Reminder

AI can write the code, the README, and the case study.

But the thinking behind your feature choices - that has to be yours.

Recruiters ask: why did you make this decision?

If you cannot answer that, the project does not help you.

Use AI to build faster. Use your own thinking to build better.

Job Preparation with AI

Generative AI for Job Hunting

CV, LinkedIn, Cover Letter, Interview Prep and Company Research

i

Key Message

AI diye generic CV banalei kaj hobe na. AI-er real value holo CV ebong LinkedIn ke specific job description onujayi optimize kora. Job hunting-e AI byabohar korte hobe research, positioning ebong preparation-er jonno.

Job Hunting Workflow Overview

Step	What to Do
JD Analysis	Job description bishleshon kore keywords, skills, hidden requirements ber kora
CV Optimization	CV ke specific role-er jonno tailor kora: measurable impact, action verbs
LinkedIn Profile	Profile optimize kora: About, Experience, Skills, Headline
Cover Letter	Non-generic, role-specific cover letter lekha
Interview Prep	Role-specific questions + answer framework practice
Company Research	Company culture, recent news, challenges, values research
Networking	Recruiter ebong professional connections ke message kora

Advanced Prompts: Job Hunting

Advanced Prompt 6.1: Job Description Deep Analyzer

Use this immediately after finding a job post. Paste the full JD and get a complete breakdown before writing a single word of your CV.

TEMPLATE PROMPT	FILLED EXAMPLE
<i>Analyze this job description completely: [PASTE FULL JOB DESCRIPTION]</i> <i>Provide:</i> <i>1. Required hard skills (technical, explicitly mentioned)</i> <i>2. Required soft skills (communication, teamwork, etc.)</i> <i>3. Hidden/implied skills (read between the lines)</i> <i>4. Experience level they actually want</i> <i>5. Top 10 keywords for CV and cover letter</i> <i>6. Red flags (unrealistic expectations, poor company signals)</i> <i>7. Questions I should prepare for the interview</i> <i>8. How to position myself in 2-3 sentences</i> <i>9. Salary range estimate</i>	<i>Analyze this job description completely: [JOB: Junior Frontend Developer at ShopNow BD]</i> <i>[JD: React, REST API, 1 yr exp preferred, fast-paced startup, own projects welcome]</i> <i>Provide:</i> <i>1. Hard skills: React, REST API, basic Git</i> <i>2. Soft skills: fast learner, self-starter</i> <i>3. Hidden: they want someone who ships, not just someone who knows theory</i> <i>4. Experience: 0-1 yr; portfolio matters more</i> <i>5. Keywords: React, REST API, component, responsive, Git, deploy, agile, startup</i> <i>6. Red flags: "fast-paced" may mean overwork</i> <i>7. Prep questions: Tell me about a React project you shipped end to end</i> <i>8. Positioning: "I am a self-taught React dev with 2 live projects. I build and ship."</i> <i>9. Salary: BDT 20,000-35,000/month entry</i>

Advanced Prompt 6.2: CV Bullet Point Optimizer

Never submit generic bullet points. Run every experience line through this prompt before adding it to your CV.

TEMPLATE PROMPT	FILLED EXAMPLE
<i>Here are my CV bullet points for [ROLE]: [PASTE YOUR BULLET POINTS]</i> <i>Target role: [TARGET ROLE] JD keywords: [KEY REQUIREMENTS]</i> <i>Rewrite each bullet using:</i> <i>1. Strong action verbs (not: worked on, helped, was responsible for)</i> <i>2. Quantified impact (% , numbers, scale)</i> <i>3. Relevant JD keywords</i> <i>4. STAR format where applicable</i> <i>5. Concise language: max 1.5 lines per bullet</i> <i>Also:</i> <i>- Flag claims needing specific backing</i> <i>- Suggest 2-3 missing bullet points</i> <i>- Tell me which bullets are weakest and why</i>	<i>Here are my CV bullet points for [Frontend Dev]:</i> <i>- Worked on a student management website</i> <i>- Helped with login page design</i> <i>- Did some API integration tasks</i> <i>Target role: Junior Frontend Developer JD keywords: React, REST API, responsive UI</i> <i>Rewrite:</i> <i>1. Built student management portal in React serving 200+ users with 98% uptime</i> <i>2. Designed and implemented responsive login UI; reduced form errors by 30%</i> <i>3. Integrated 5 REST API endpoints for real-time dashboard data rendering</i> <i>Weakest: bullet 2 - "helped" shows no ownership Missing: mention of Git, deployment, testing</i>

Advanced Prompt 6.3: LinkedIn Profile Optimizer

Your LinkedIn headline and About section are the first things a recruiter reads. This prompt builds both from scratch around your actual background.

TEMPLATE PROMPT	FILLED EXAMPLE
-----------------	----------------

Write a complete LinkedIn profile optimization for a [ROLE] professional.

About me:

- Status: [STUDENT / FRESH GRAD / X YRS EXP]
- Skills: [LIST MAIN SKILLS]
- Projects: [2-3 KEY PROJECTS]
- Goal: [WHAT ROLE YOU WANT]
- Personality: [ANALYTICAL / CREATIVE / etc.]

Write:

1. Headline (120 chars max): keyword-rich, not just a job title
2. About section (300 words): story-driven, skills-focused, ends with CTA
3. Top 10 skills to add
4. Featured section: what to pin
5. Connection request note template

Tone: Confident, human, not robotic.

Write a complete LinkedIn profile optimization for a Frontend Developer (student).

About me:

- Status: Final year CSE student
- Skills: React, Tailwind, Node.js, REST API
- Projects: TaskFlow (task manager app), ShopUI (e-commerce frontend)
- Goal: Junior Frontend Developer role
- Personality: Detail-oriented, fast learner

Write:

1. Headline: "CSE Student | React Developer | Building clean UIs | Open to work"
2. About: "I build interfaces people enjoy using. Currently in final year CSE at [Uni]. I have shipped 3 React projects including a task manager used by 50+ classmates. [Skills] [CTA: open to frontend roles]"
3. Skills: React, JavaScript, Tailwind CSS, REST API, Git, Node.js, HTML, CSS, Responsive Design, Problem Solving
4. Pin: TaskFlow live demo + GitHub link
5. Note: "Hi [Name], I am a CSE student building React projects. Would love to connect and learn from your work."

Advanced Prompt 6.4: Targeted Cover Letter Writer

One generic cover letter gets ignored. This prompt forces specificity: every sentence should be about this role at this company.

TEMPLATE PROMPT	FILLED EXAMPLE
Write a targeted cover letter for: Role: [JOB TITLE] Company: [COMPANY NAME] JD summary: [KEY REQUIREMENTS] My background: - Education: [DEGREE, YEAR] - Relevant skills: [LIST] - Best project: [NAME + 1-LINE DESCRIPTION] - Why this company: [GENUINE REASON] Structure: 1. Opening: specific, not "I am writing to..." 2. Para 1: most relevant skill + concrete result 3. Para 2: why this company specifically 4. Closing: confident call to action Rules: - Max 250 words - No cliches: team player, passionate, hard-working - No lies or exaggerations - Sound human, not like an AI template	Write a targeted cover letter for: Role: Junior Frontend Developer Company: ShopNow BD JD: React, REST API, own projects welcome, startup environment, fast learner preferred My background: - Education: BSc CSE, final year, BUET - Skills: React, Tailwind, Node.js, REST API - Best project: ShopUI: a responsive e-commerce frontend built in React with cart, filters, and live API integration - Why: ShopNow BD is solving last-mile e-commerce UX for Bangladesh; I want to build for a market I actually live in Opening: "ShopNow BD is fixing something I personally find frustrating about online shopping in Bangladesh. I want to help build that." Para 1: Built ShopUI, a React frontend with full cart and API integration, deployed live Para 2: I follow ShopNow's product updates; your focus on mobile-first UX matches how I have been building Closing: "I would love to show you ShopUI in a quick call. I am available this week."

Advanced Prompt 6.5: Interview Simulator

Practice this before every real interview. Tell the AI the role, the company type, and the difficulty level. Let it run 10 questions from start to finish.

TEMPLATE PROMPT	FILLED EXAMPLE
<i>Act as a senior interviewer for a [ROLE] position at a [TYPE OF COMPANY].</i> <i>Interview mode: [BEHAVIORAL / TECHNICAL / MIX]</i> <i>Difficulty: [ENTRY LEVEL / MID LEVEL]</i> <i>Run the interview:</i> <i>1. Ask one question at a time</i> <i>2. After my answer, give me:</i> <i>- Score: [X/10]</i> <i>- What was strong</i> <i>- What was weak or missing</i> <i>- An example of a better answer structure</i> <i>3. Ask 10 questions total</i> <i>4. Final evaluation:</i> <i>- Overall score</i> <i>- Top 3 strengths</i> <i>- Top 3 areas to improve</i> <i>- One piece of specific advice</i> <i>Start with: Tell me about yourself</i> <i>Adjust follow-up questions based on my answers.</i>	<i>Act as a senior interviewer for a Junior Frontend Developer role at a Dhaka-based B2C e-commerce startup.</i> <i>Interview mode: MIX (technical + behavioral)</i> <i>Difficulty: Entry level</i> <i>Run the interview:</i> <i>1. One question at a time</i> <i>2. After each answer give me score /10, what was strong, what was missing, example of a better answer</i> <i>3. 10 questions total</i> <i>4. Final: score, strengths, improvements, one piece of specific advice</i> <i>Start with: Tell me about yourself</i> <i>Focus on: React, problem-solving under pressure, startup culture fit, how I handle feedback, and one technical debugging task</i>

Advanced Prompt 6.6: Company Research Brief

Walk into every interview knowing more about the company than the interviewer expects. This prompt builds a complete pre-interview brief in minutes.

TEMPLATE PROMPT	FILLED EXAMPLE
-----------------	----------------

*I have an interview at [COMPANY NAME]
for a [ROLE] position.*

Create an interview prep brief:

- 1. Company overview (product, model, scale)*
- 2. Culture and values (publicly known)*
- 3. Recent news or challenges (last 6-12 months)*
- 4. Main competitors*
- 5. Genuine reasons to want to work there*
- 6. Questions they will likely ask based on their values*
- 7. 3-5 smart questions I should ask them*
- 8. Red flags to watch for*
- 9. How to tailor my "Why this company" answer*

*I have an interview at ShopNow BD
for a Junior Frontend Developer role.*

Brief:

- 1. Overview: Dhaka-based e-commerce platform focused on SME sellers, mobile-first UX*
- 2. Culture: fast-moving, product-driven, flat structure based on LinkedIn posts*
- 3. Recent: launched seller dashboard Q1 2025, raised seed funding (TechCrunch BD)*
- 4. Competitors: Chaldal, Shajgoj, Daraz*
- 5. Reasons: building for local market, strong product roadmap, early stage so high learning curve*
- 6. Likely questions: How do you handle tight deadlines? Tell me about a project you shipped with limited resources*
- 7. My questions: What does your sprint cycle look like? How do you measure frontend quality?*
- 8. Red flag: no mention of code review culture on their JD*
- 9. "Why ShopNow": I shop here; I have specific UI feedback and ideas ready*

Advanced Prompt 6.7: Networking Message Writer

Most networking messages are ignored because they are too long, too vague, or too salesy. This prompt writes three versions so you can pick the right one for the context.

TEMPLATE PROMPT

FILLED EXAMPLE

Write a LinkedIn message to
[TARGET: RECRUITER / SENIOR DEV /
ALUMNI].

Context:

- My role: [STUDENT / FRESH GRAD / SWITCHER]
- Their role: [TITLE AND COMPANY]
- Reason: [applying / advice / referral]
- Connection point: [shared uni / field / mutual connection]

Write 3 versions:

1. Connection request (300 chars max):
warm, specific, not salesy
2. Follow-up (after accepted):
brief ask with clear purpose
3. Cold outreach (no mutual connection):
stand out without being pushy

Rules:

No "I hope this message finds you well"
Be specific. Be brief. Show you did research.

Write a LinkedIn message to
[TARGET: Senior Frontend Dev at ShopNow BD].

Context:

- My role: Final year CSE student
- Their role: Senior Frontend Engineer, ShopNow BD
- Reason: I am applying for their junior role and want insight on team culture
- Connection point: both CSE background, both worked with React

Write 3 versions:

1. Request (300 chars): "Hi Rahim, I am a CSE student applying to ShopNow BD. I noticed you worked on the seller dashboard rewrite. Would love to connect."
2. Follow-up: "Thanks for connecting. Quick question: what does the frontend review process look like at ShopNow? Trying to understand the team dynamic before my interview next week."
3. Cold: "Hi Rahim, I am applying for the junior frontend role at ShopNow. I built a similar seller UI in React (link below) and would love 10 minutes of your time if possible."
